EMI/EMP Filter Connectors

FOR MIL-DTL-38999 AND OTHER MIL-AERO INTERCONNECTION SYSTEMS

OCTOBER 2013

SERIES 240

EMI/EMP Filter Connectors

High reliability EMI/EMP filter connectors resolve even the most difficult EMC challenges

Glenair is unique in the high-reliability mil-aero filter connector business. We are the only supplier of both build-to-spec as well as standard catalog filter connector solutions for the complete range of currently specified military aerospace circular and rectangular connectors. We maintain a 100% vertically integrated manufacturing facility for every aspect of EMI/EMP filter connector fabrication including in-house fabrication of multilayer ceramic planar arrays. As a result, we offer the fastest turnaround in our industry on both build-to-spec and standard catalog solutions. Our capabilities include:

- Planar, multilayer ceramic capacitive filters, with and without transient voltage suppression diodes
- C, L-C, C-L and Pi filter electrical configurations
- PC tail, solder cup or crimp-contact termination
- 10 to 1,000,000 pF capacitance
- Special high operating temperature solutions

SERIES 240

EMI/EMP Filter Connectors

Glenair manufactures a full range of filter connectors for use in EMC/EMP management of electronic systems and interconnect cabling. All connectors are designed in accordance with applicable connector specifications, and are designed to mate with plugs with the same insert configuration and opposite contact gender. Planar filter arrays and TVS diodes may be integrated into both standard catalog as well as build-to-order configurations. Glenair's state-of-the-art diode burn-in process tests leaded and surface mount diodes with leakage current monitored throughout the entire test procedure ensuring field reliability.

Table I: Capacitor Array Code / Capacitance Range

Class	Pi - Circuit (pF)	C - Circuit (pF)
X	160,000 - 240,000	80,000 - 120,000
Y	80,000 - 120,000	40,000 - 60,000
Z	60,000 - 90,000	30,000 - 45,000
A	38,000 - 56,000	19,000 - 28,000
B	32,000 - 45,000	16,000 - 22,500
C	18,000 - 33,000	9,000 - 16,500
D	8,000 - 12,000	4,000 - 6,000
E	3,300 - 5,000	1,650 - 2,500
F	800 - 1,300	400 - 650
G	400 - 600	200 - 300
J	70-120	35-60

ARINC 600 size 2 filter connector. Glenair also manufactures narrow-profile size 1 and double-wide size 3. All configurations are environmentally sealed for rugged airframe applications.

- **Planar, multilayer ceramic capacitive filters, with and without transient voltage suppression diodes**
- **C and Pi electrical configurations**
- **PC tail or solder cup wire termination**
- **35 – 240,000 pF capacitance**
- **Fast and reliable diode burn-in and test services**
- **Turnkey in-house manufacturing of all filter connector elements and processes**

Performance Ratings

Shock and Vibration	IAW MIL-DTL-38999
Thermal Shock	-55° C to +125° C per EIA-364-32; 380 cycles
Operating Temperature	-55° C to +125° C
Mating Cycles	500 Mating Cycles
Corrosion Resistance	1000 Hours on Stainless Steel Shells
Shielding Effectiveness	Effective over a range of 100MHz to 10GHz with a minimum 50dB effectiveness at 10GHz
Immersion Rating	MIL-STD-810 Method 512; 1 Meter for 1 Hr. (selected series)
Shell-to-Shell Resistance	2.5 Millivolt drop maximum, per EIA-364-83

Electrical Performance

Current Rating	up to 220 Amps
Capacitance	10pF to 1,000,000pF
Insulation Resistance	5GΩ
Dielectric Withstanding Voltage	100 to 2500 VDC
Dissipation Factor	2.5% Max
Diode Clamping Voltage Range	3.3V to 260V
Diode Peak/Pulse Power	up to 30KW

The Industry's Most Comprehensive and Compliant Filter Service

Connector Series:

38999	83513
Series I, II, III, IV	5015
26482	Sr. 80 Mighty Mouse
83723	Sr. 79 Micro-Crimp
28840	Sr. ITS Reverse-Bayonet
24308	Sr. 28 HiPer-D
ARINC 600	Sr. 970 PowerTrip

Line Types:

CAN BUS	TTL
ARINC 429	Analog Sensors
RS 232	Thermocouple Wires
RS 422	USB
RS 485	Ethernet

Requirement Compliance:

MIL-STD-449D: RF Spectrum
MIL-STD-461E: EMI Susceptibility
MIL-STD-1310G: Shipboard EMC
MIL-STD-1512: Electroexplosive Subsystems
MIL-STD-1541A: EMC for Space Systems
MIL-STD-1795A: Aerospace Lightning Protection
MIL-STD-1857: Grounding, Bonding and Shielding
MIL-STD-1542B: EMC and Grounding for Space Systems
EN 61000-4-2, 3, 4, 5, 6, 8: EM, RF and Power
RTCA/DO-160 Sec 22: Pin/Cable Level and Waveform

Filter Module Elements

Multilayer Ceramic Planar Array: Containing a network of capacitors, feedthrus and ground lines.

Inductors: Ferrite Beads to provide inductance and increase insertion loss

Contact Types: Choose from Solder Cup, PC Tail or Piggy-Back Crimp (Consult Factory for PC Tail Length Options).

Contact Material: Gold Plated Copper Alloy.

Pin/Hole Intersection: The business-end of the filter, providing each contact with its capacitance value and grounding.

Filter Types

C Single capacitor with low self inductance
LC, CL Single capacitor combined with an inductive element
Pi Dual capacitors with a single inductive element positioned between.

SERIES 240

MS Type Circular Filter Connectors

The industry's best short lead-time source for planar array type EMI/EMP filter connectors

Glenair's family of circular military standard type EMI/EMP filter connectors is designed to meet stringent military/aerospace performance requirements. Each connector series is offered with standard low-pass Pi or C filter arrays, or with customized filters to meet specific frequency and capacitance requirements. Thermally conductive epoxy protects the filter package from mechanical and heat stress and also provides a waterproof seal. All filtered receptacles are interchangeable with standard plugs and connector savers, and each respective series of connectors is supplied with a range of shell styles in both environmental and hermetic configurations.

Notes

1. Materials/Finishes: Shells, Barrel, Coupling Nut, Jam Nut - See Table I
Insulators - High grade rigid dielectric/N.A.
Seals - Fluorosilicone
Contacts: Copper alloy 50 μ " Gold over 50 μ " Nickel
2. Assembly to be identified with Glenair's name, part number, and date code - space permitting.
3. Insert Arrangement in accordance with MIL-STD-1560. (Arrangement shown for reference only)
4. EMI Circular Filter Receptacle connectors designed to meet requirements of MIL-STD-2120 and MIL-DTL-38999, Series I.
5. All contacts to have identical filter value. Other filter arrangements available, contact factory.
6. Electrical Ratings: DWV- 500 VDC; Standard Operating Voltage 200 VDC (Filter class X, Y and Z are 250 VDC)
7. Insulation Resistance: 5000 MegOhms at 200 VDC for classes A, B, C, D, E, F, G, J. 1000 MegOhms at 83 VDC for classes X, Y, Z
8. Operating Temperature: -55°C to +125°C (Env Class Connectors)
9. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

D38999 SERIES I TYPE JAM NUT RECEPTACLE

How To Order										
Sample Part Number	240-381	J	ME	15-35	P	S	P	A	N	N
Filter Connector	MIL-DTL-38999 Series I Type									
Shell Style	J = Jam Nut									
Connector Class	See Table I									
Insert Arrangement	IAW MIL-STD-1560. (See pages B-4 – B-5)									
Contact Gender	P = Pin S = Socket									
Termination	S = Solder Cup P = PC Tail									
Filter Type	P = Pi Circuit C = C Circuit (See Note 2)									
Capacitance	See Table II									
Flange Mounting Style	N = Not Applicable									
Alternate Key Position	A, B, C, D, N = Normal (See page B-5)									

Note

1. "F" accessory threads for shell size 9 thru 17 are one size larger than MIL-DTL-38999 Series I to accommodate filters
2. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

D38999 SERIES I TYPE CONNECTOR ADAPTER

How To Order									
Sample Part Number	240-381	A	ME	15-35	PS	P	A	N	U
Filter Connector	MIL-DTL-38999 Series I Type								
Shell Style	A = Connector Adapter								
Connector Class	See Table I								
Insert Arrangement	IAW MIL-STD-1560. (See pages B-4 – B-5)								
Contact Gender	PS = Pins, Plug Side SP = Sockets, Plug Side (See Note 2)								
Filter Type	P = Pi Circuit C = C Circuit (See Note 1)								
Capacitance	See Table II								
Flange Mounting Style	N = Not Applicable								
Alternate Key Position	A, B, C, D, N = Normal, U = Universal (See page B-5) (See Note 3)								

* Please consult the factory for Pin/Pin and/or Socket/Socket contact arrangements.

Notes

1. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.
2. Please consult the factory for Pin/Pin and/or Socket/Socket contact arrangements.
3. Do not mate Universal key position with another Universal.

Dimensions in inches (millimeters) and are subject to change without notice.

Notes

1. Materials/Finishes: Shells, Barrel, Coupling Nut, Jam Nut - See Table I
Insulators - High grade rigid dielectric/N.A.
Seals - Fluorosilicone
Contacts: Copper alloy 50 μ " Gold over 50 μ " Nickel
2. Assembly to be identified with Glenair's name, part number, and date code - space permitting.
3. Insert Arrangement in accordance with MIL-STD-1560. (Arrangement shown for reference only)
4. EMI Circular Filter Receptacle connectors designed to meet requirements of MIL-STD-2120 and MIL-DTL-38999, Series II.
5. All contacts to have identical filter value. Other filter arrangements available, contact factory.
6. Electrical Ratings: DWV- 500 VDC; Standard Operating Voltage 200 VDC (Filter class X, Y and Z are 250 VDC)
7. Insulation Resistance: 5000 MegOhms at 200 VDC for classes A, B, C, D, E, F, G, J. 1000 MegOhms at 83 VDC for classes X, Y, Z
8. Operating Temperature: -55°C to +125°C (Env Class Connectors)
9. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

Notes

- Materials/Finishes: Shells, Barrel, Coupling Nut, Jam Nut - See Table I
Insulators - High grade rigid dielectric/N.A.
Seals - Fluorosilicone
Contacts: Copper alloy 50µ" Gold over 50µ" Nickel
- Assembly to be identified with Glenair's name, part number, and date code - space permitting.
- Insert Arrangement in accordance with MIL-STD-1560. (Arrangement shown for reference only)
- EMI Circular Filter Receptacle connectors designed to meet requirements of MIL-STD-2120 and MIL-DTL-38999, Series III.
- All contacts to have identical filter value. Other filter arrangements available, contact factory.
- Electrical Ratings: DWV- 500 VDC; Standard Operating Voltage 200 VDC (Filter class X, Y and Z are 250 VDC)
- Insulation Resistance: 5000 MegOhms at 200 VDC for classes A, B, C, D, E, F, G, J. 1000 MegOhms at 83 VDC for classes X, Y, Z
- Operating Temperature: -55°C to +125°C (Env Class Connectors)
- Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

D38999 SERIES III TYPE WALL MOUNT RECEPTACLE WITH CRIMP REMOVABLE CONTACTS

How To Order										
Sample Part Number	240-383	R	ME	15-35	P	C	P	A	C	N
Filter Connector	MIL-DTL-38999 Series III Type									
Shell Style	R = Wall Mount with Crimp Contacts									
Connector Class	See Table I									
Insert Arrangement	IAW MIL-STD-1560. (See pages B-28 – B-29)									
Contact Gender	P = Pin S = Socket									
Termination	C = Crimp									
Filter Type	P = Pi Circuit C = C Circuit (See Note 2)									
Capacitance	See Table II									
Flange Mounting Style	H = Round Holes C = Clinch Nuts (4-40 UNC) [†] M = Metric Clinch Nuts (M3) [†] S = Slotted Holes									
Alternate Key Position	A, B, C, D, E, N = Normal (See page B-29)									

Notes

1. Crimp removable contacts to conform to MIL-C-39029/57-358, Size 16, MIL-C-39029/57-357 Size 20, and MIL-C-39029/57-354 Size 22D (Supplied loose).
2. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.
3. Helicoil and threaded inserts/specials available upon request.

Dimensions in inches (millimeters) and are subject to change without notice.

MIL-DTL-38999 Series III Type Filter Connector
Jam Nut Receptacle with Crimp Removable Contacts

D38999 SERIES III TYPE JAM NUT RECEPTACLE WITH CRIMP REMOVABLE CONTACTS

B

How To Order										
Sample Part Number	240-383	S	ME	15-35	P	C	P	A	N	N
Filter Connector	MIL-DTL-38999 Series III Type									
Shell Style	S = Jam Nut with Crimp Contacts									
Connector Class	See Table I									
Insert Arrangement	IAW MIL-STD-1560. (See pages B-28 – B-29)									
Contact Gender	P = Pin S = Socket									
Termination	C = Crimp									
Filter Type	P = Pi Circuit C = C Circuit (See Note 2)									
Capacitance	See Table II									
Flange Mounting Style	N = Not Applicable									
Alternate Key Position	A, B, C, D, E, N = Normal (See page B-29)									

Notes

1. Crimp removable contacts to conform to MIL-C-39029/57-358, Size 16, MIL-C-39029/57-357 Size 20, and MIL-C-39029/57-354 Size 22D (Supplied loose).
2. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

D38999 SERIES III TYPE FILTER CONNECTOR ADAPTER

How To Order									
Sample Part Number	240-383	B	ME	15-35	PS	P	A	N	N
Filter Connector	MIL-DTL-38999 Series III Type								
Shell Style	B = Connector Adapter								
Connector Class	See Table I								
Insert Arrangement	IAW MIL-STD-1560. (See pages B-28 – B-29)								
Contact Gender	PS = Pins, Plug Side SP = Sockets, Plug Side (See Note 2)								
Filter Type	P = Pi Circuit C = C Circuit (See Note 1)								
Capacitance	See Table II								
Flange Mounting Style	N = Not Applicable								
Alternate Key Position	A, B, C, D, E, N = Normal, U = Universal (See page B-29) (See Note 3)								

Notes

1. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.
2. Please consult the factory for Pin/Pin and/or Socket/Socket contact arrangements
3. Do not mate Universal key position with another Universal

Dimensions in inches (millimeters) and are subject to change without notice.

	240-384R	<i>New!</i> Wall Mount Receptacles with Crimp Removable Contacts	Page B-58

Notes

1. Materials/Finishes: Shells, Jam Nut - See Table I
Insulators - High grade rigid dielectric/N.A.
Seals - Fluorosilicone
Contacts: Copper alloy 50 μ " Gold over 50 μ " Nickel
2. Assembly to be identified with Glenair's name, part number, and date code - space permitting.
3. Insert Arrangement in accordance with MIL-STD-1560. (Arrangement shown for reference only)
4. EMI Circular Filter Receptacle connectors designed to meet requirements of MIL-STD-2120 and MIL-DTL-38999, Series IV.
5. All contacts to have identical filter value. Other filter arrangements available, contact factory.
6. Electrical Ratings: DWV- 500 VDC; Standard Operating Voltage 200 VDC (Filter class X, Y and Z are 250 VDC)
7. Insulation Resistance: 5000 MegOhms Min. at 200 VDC.
8. Operating Temperature: -55°C to +125°C (Env Class Connectors)
9. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

D38999 SERIES IV TYPE WALL MOUNT RECEPTACLE

How To Order										
Sample Part Number	240-384	W	ME	15-35	P	S	P	C	H	N
Filter Connector	MIL-DTL-38999 Series IV Type									
Shell Style	W = Wall Mount									
Connector Class	See Table I									
Insert Arrangement	IAW MIL-STD-1560. (See pages B-50 – B-51)									
Contact Gender	P = Pin S = Socket									
Termination	P = PC Tail S = Solder Cup									
Filter Type	P = Pi Circuit C = C Circuit (See Note 1)									
Capacitance	See Table II									
Flange Mounting Style	H = Round Holes C = Clinch Nuts (4-40 UNC) M = Metric Clinch Nuts (M3)									
Alternate Key Position	A, B, C, D, K, L, M, R, U, N = Normal (See page B-51)									

Notes

- Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

D38999 SERIES IV TYPE WALL MOUNT RECEPTACLE WITH CRIMP REMOVABLE CONTACTS

How To Order	
Sample Part Number	240-384 R ME 15-35 P S P C H N
Filter Connector	MIL-DTL-38999 Series IV Type
Shell Style	R = Wall Mount with Crimp Contacts
Connector Class	See Table I
Insert Arrangement	IAW MIL-STD-1560. (See pages B-50 – B-51)
Contact Gender	P = Pin S = Socket
Termination	C = Crimp
Filter Type	P = Pi Circuit C = C Circuit (See Note 2)
Capacitance	See Table II
Flange Mounting Style	H = Round Holes C = Clinch Nuts (4-40 UNC) M = Metric Clinch Nuts (M3)
Alternate Key Position	A, B, C, D, K, L, M, R, U, N = Normal (See page B-51)

Notes

1. Crimp removable contacts to conform to MIL-C-39029/57-358, Size 16, MIL-C-39029/57-357 Size 20, and MIL-C-39029/57-354 Size 22D (Supplied loose).
2. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

	240-264J	Jam Nut Receptacles	Page B-66
	240-264A	Connector Adapters	Page B-68

Notes

1. Materials/Finishes: Shells, Barrel, Coupling Nut, Jam Nut - See Table I
Insulators - high grade rigid dielectric/N.A.
Seals - Silicone
Contacts: Copper alloy 50 μ " Gold over 50 μ " Nickel
2. Assembly to be identified with Glenair's name, part number, and date code - space permitting.
3. Insert Arrangement in accordance with MIL-STD-1669. (Arrangement shown for reference only)
4. EMI Circular Filter Receptacle connectors designed to meet requirements of MIL-STD-2120 and MIL-DTL-26482, Series II.
5. All contacts to have identical filter value. Other filter arrangements available, contact factory.
6. Electrical Ratings: DWV- 500 VDC; Standard Operating Voltage 200 VDC (Filter class X, Y and Z are 250 VDC)
7. Insulation Resistance: 5,000 MEGOHMS min @ 200VDC for Class A, B, C, D, E, F, G & J. 1,000 MEGOHMS @ 83VDC for classes, X, Y, & Z
8. Operating Temperature -55°C to +125°C (Env Class Connectors)
9. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

MIL-DTL-26482 SERIES II TYPE WALL MOUNT RECEPTACLE, NARROW FLANGE

How To Order										
Sample Part Number	240-264	W	ME	16-26	P	S	P	A	H	N
Filter Connector	MIL-DTL-26482 Series II Type									
Shell Style	W = Wall Mount									
Connector Class	See Table I									
Insert Arrangement	IAW MIL-STD-1669. (See pages B-62 – B-63)									
Contact Gender	P = Pin S = Socket									
Termination	P = PC Tail S = Solder Cup									
Filter Type	P = Pi Circuit C = C Circuit (See Note 1)									
Capacitance	See Table II									
Flange Mounting Style	H = Round Holes C = Clinch Nuts (4-40 UNC) M = Metric Clinch Nuts (M3)									
Alternate Insert Position	W, X, Y, Z, N = Normal (See page B-63)									

Notes

1. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

Notes

1. Materials/Finishes: Shells, Barrel, Coupling Nut, Jam Nut - See Table I
Insulators - high grade rigid dielectric/N.A.
Seals - Fluorosilicone
Contacts: Copper alloy 50 μ " Gold over 50 μ " Nickel
2. Assembly to be identified with Glenair's name, part number, and date code - space permitting.
3. Insert Arrangement in accordance with MIL-STD-1554. (Arrangement shown for reference only)
4. EMI Circular Filter Receptacle connectors designed to meet requirements of MIL-STD-2120 and MIL-DTL-83723, Series III.
5. All contacts to have identical filter value. Other filter arrangements available, contact factory.
6. Electrical Ratings: DWV- 500 VDC; Standard Operating Voltage 200 VDC (Filter class X, Y and Z are 250 VDC)
7. Insulation Resistance: 5000 MegOhms Min. at 200 VDC.
8. Operating Temperature -55°C to +125°C (Env Class Connectors)
9. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

240-ITSW

Rear Panel Mount Receptacles

**Page
B-94**

- Fast, easy bayonet coupling connector: 1/4 turn
- Ideal for rail, industrial and military applications
- C filter circuits from 9,000 pF to 120,000 pF
- Low-pass multilayer ceramic planar array
- All shell styles: plug, square flange, jam-nut, etc.
- High shock and vibration resistance
- Contact sizes from #0 to #8 and #12 in limited insert arrangements
- Solder-cup terminations
- Intermateable with Veam CIR, Amphenol GT and ITT Cannon CA**B, and all VG 95234 reverse bayonet connectors

FILTERED HARSH-ENVIRONMENT SOLUTIONS FOR POPULAR ITS SERIES INDUSTRIAL, RAIL, AND MILITARY BAYONET CONNECTORS

The Glenair Series ITS Reverse Bayonet Power and Signal Connector is ideally suited for all rugged application connections. Based on the MIL-DTL-5015 standard and sharing many of the same insert arrangements and shell dimensions, the reverse bayonet provides faster coupling, especially when the connector is situated in an awkward or hard to reach location. The connector's high resistance to vibration and shock provides reliable mating in even the most rigorous application environments. Environmental protection to IP67 levels provides additional reliability.

Dimensions in inches (millimeters) and are subject to change without notice.

ITS Series, VG 95234 Type Reverse-Bayonet Filter Connectors Panel Cut-Outs

Notes

- Materials/Finishes: Shells, Jam Nut - See Table II
Insulators - high grade rigid dielectric/N.A.
Seals - Fluorosilicone
Contacts: Copper alloy 50μ" Gold over 50μ" Nickel
- Assembly to be identified with Glenair's name, part number, and date code - space permitting.
- Insert Arrangement in accordance with MIL-STD-1651. (Arrangement shown for reference only)
- EMI Circular Filters designed to meet requirements of MIL-STD-2120 and VG 95234.
- All contacts to have identical filter value. Other filter arrangements available, contact factory.
- Electrical Ratings: DWV- 500 VDC; Standard Operating Voltage 200 VDC.
- Insulation Resistance: 5000 MegOhms Min. at 200 VDC for Class A, B, C, D, E, F, G & J. 1,000 MegOhms @ 100 VDC for Classes X, Y, & Z
- Operating Temperature -55°C to +125°C (Env Class Connectors)
- Other filter styles (Pi, C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Jam Nut Mount with Reverse Bayonet Coupling

VG 95234 TYPE JAM NUT RECEPTACLE, REVERSE BAYONET COUPLING

B

How To Order	
Sample Part Number	240-ITS J NF 20-3 P S C B N
Filter Connector	VG 95234 Type
Shell Style	J = Jam Nut JT = Jam Nut with Accessory Thread (See Note 2)
Connector Class	See Table II
Insert Arrangement	See pages B-88 – B-91
Contact Gender	P = Pin S = Socket
Termination Type	S = Solder Cup
Filter Type	C = C Circuit (See Note 1)
Capacitance	See Table III
Alternate Insert Position	W, X, Y, Z, N = Normal (See pages B-88 – B-91)

Notes

- Other filter styles (Pi, C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.
- Shell style JT shown. Shell style J is less accessory threads and teeth.

Dimensions in inches (millimeters) and are subject to change without notice.

Notes

1. Materials/Finishes: Shells, Jam Nut, Coupling Nut - See Table II
Insulators - high grade rigid dielectric/N.A.
Seals - Fluorosilicone
Contacts: Copper alloy 50 μ " Gold over 50 μ " Nickel
2. Assembly to be identified with Glenair's name, part number, and date code - space permitting.
3. Insert Arrangement in accordance with MIL-STD-1651. (Arrangement shown for reference only)
4. EMI Circular Filter receptacle connectors designed to meet requirements of MIL-DTL-5015 Series III.
5. All contacts to have identical filter value. Other filter arrangements available, contact factory.
6. Electrical Ratings: DWV- 500 VDC; Standard Operating Voltage 200 VDC.
7. Insulation Resistance: 5000 MegOhms Min. at 200 VDC for classes A, B, C, and H.
1,000 MegOhms Min. at 100 VDC for classes X, Y, and Z
8. Operating Temperature -55°C to +125°C (Env Class Connectors)
9. Other filter styles (Pi, C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

MIL-DTL-5015 TYPE JAM NUT RECEPTACLE

How To Order	
Sample Part Number	240-515 J NF 36-4 SS C B X
Filter Connector	MIL-DTL-5015 Type
Shell Style	J = Jam Nut
Connector Class	See Table II
Insert Arrangement	IAW MIL-STD-1651 (See pages B-97 – B-99)
Contact Type	PS = Pin, Solder Cup SS = Socket, Solder Cup
Filter Type	C = C Circuit (See Note 1)
Capacitance	See Table III
Alternate Insert Position	Per MIL-STD-1651. W, X, Y, Z, N = Normal (See pages B-97 – B-99)

Notes

1. Other filter styles (Pi, C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

MIL-DTL-5015 TYPE WALL MOUNT RECEPTACLE

How To Order	
Sample Part Number	240-515 W NF 36-4 SS C B X
Filter Connector	MIL-DTL-5015 Type
Shell Style	W = Wall Mount
Connector Class	See Table II
Insert Arrangement	IAW MIL-STD-1651 (See pages B-97 – B-99)
Contact Type	PS = Pin, Solder Cup SS = Socket, Solder Cup
Filter Type	C = C Circuit (See Note 1)
Capacitance	See Table III
Alternate Insert Position	Per MIL-STD-1651. W, X, Y, Z, N = Normal (See pages B-97 – B-99)

Notes

- Other filter styles (Pi, C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

Notes

1. Materials/Finishes: Shells, Barrel, Coupling Nut, Jam Nut - See Table I
Insulators - high grade rigid dielectric/N.A.
Seals - Fluorosilicone
Contacts: Copper alloy 50 μ " Gold over 50 μ " Nickel
2. Assembly to be identified with Glenair's name, part number, and date code - space permitting.
3. Insert Arrangement in accordance with MIL-STD-1698. (Arrangement shown for reference only)
4. EMI Circular Filter Receptacle connectors designed to meet requirements of MIL-STD-2120 and MIL-DTL-28840.
5. All contacts to have identical filter value. Other filter arrangements available, contact factory.
6. Electrical Ratings: DWV- 500 VDC; Standard Operating Voltage 200 VDC (Filter class X, Y and Z are 250 VDC)
7. Insulation Resistance: 5000 MegOhms Min. at 200 VDC.
8. Operating Temperature -55°C to +125°C (Env Class Connectors)
9. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

SERIES 80

Mighty Mouse Filter Connectors

Ultra small and lightweight EMI/EMP filter connectors

Glenair's filtered Series 80 Mighty Mouse connectors provide significant size and weight savings compared to larger "MS" connectors. The high density #23 contacts provide almost double the density of D38999. Designed to meet stringent aerospace performance requirements, these connectors are offered with standard low pass Pi or C circuit filter arrays, or with customized filters to meet your specific needs. Thermally conductive epoxy protects the filter package from mechanical and heat stress and also provides a waterproof seal. These filtered receptacles mate to Series 801 stub ACME threaded, Series 804 Push-Pull, Series 805 Triple-Start and Series 800 UN threaded, and are available in jam nut, square flange and connector adapter versions.

Notes

- Materials/Finishes: Shells, Barrel, Coupling Nut, Jam Nut - See Table I
Insulators - High grade rigid dielectric/N.A.
Seals - Fluorosilicone
Contacts: Copper alloy 50μ" Gold over 50μ" Nickel
- Assembly to be identified with Glenair's name, part number, and date code - space permitting.
- All contacts to have identical filter value. Other filter arrangements available, contact factory.
- Electrical Ratings: DWV- 300 VDC; Standard Operating Voltage 200 VDC (Filter class X, Y and Z are 250 VDC)
- Insulation Resistance: 5000 MegOhms Min. at 200 VDC.
- Operating Temperature: -55°C to +125°C (Env Class Connectors)
- Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

MIGHTY MOUSE FILTER CONNECTOR, DUAL-FLANGE WALL-MOUNT RECEPTACLE

How To Order									
Sample Part Number	240-801-	12	M	6-7	P	P	P	A	A
Filter Connector	Series 801 Mighty Mouse								
Shell Style	12 = Square flange receptacle with PCB contacts								
Shell Material/Finish	See Table I								
Insert Arrangement	See pages C-3 - C-7								
Contact Gender	P = Pin S = Socket								
Termination Type	P = PC Tail								
Filter Type	P = Pi Circuit C = C Circuit (See Note 1)								
Capacitance	See Table II								
Alternate Key Position	A, B, C, D, E, F, U A = Normal, U = Universal (See page C-2)								

Notes

- Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

EMI/EMP Filter Connectors

U.S. CAGE Code 06324

Rev. 06.02.15

Printed in U.S.A.

240-805

Series 805 Mighty Mouse Filter Connector Receptacles with Triple-Start ACME Coupling Threads, Solder Cup Contacts and Banding Platform

MIGHTY MOUSE TRIPLE-START RECEPTACLE FILTER CONNECTOR WITH SOLDER CUP CONTACTS AND BANDING PLATFORM

How To Order	
Sample Part Number	240-805- 07 M 8-7 P S P A A
Filter Connector	Series 805 Mighty Mouse Triple-Start
Shell Style	01 = Square flange receptacle with solder cup contacts and banding platform 07 = Jam nut receptacle with solder cup contacts and banding platform
Shell Material/Finish	See Table I
Insert Arrangement	See pages C-3 – C-7
Contact Gender	P = Pin S = Socket
Termination Type	S = Solder Cup
Filter Type	P = Pi Circuit C = C Circuit (See Note 1)
Capacitance	See Table II
Alternate Key Position	A, B, C, D, E, F, U A = Normal, U = Universal (See page C-2)

Notes

- Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

MIGHTY MOUSE TRIPLE-START RECEPTACLE FILTER CONNECTOR WITH PCB CONTACTS

How To Order	
Sample Part Number	240-805- 02 M 8-7 P P P A A
Filter Connector	Series 805 Mighty Mouse Triple-Start
Shell Style	02 = Square flange receptacle with PCB contacts 08 = Jam nut receptacle with with PCB contacts
Shell Material/Finish	See Table I
Insert Arrangement	See pages C-3 – C-7
Contact Gender	P = Pin S = Socket
Termination Type	P = PC Tail
Filter Type	P = Pi Circuit C = C Circuit (See Note 1)
Capacitance	See Table II
Alternate Key Position	A, B, C, D, E, F, U A = Normal, U = Universal (See page C-2)

Notes

1. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

240-805

Series 805 Mighty Mouse Filter Connector Receptacles with Triple-Start ACME Coupling Threads

Table I: Connector Class

Sym	Material	Finish Description
M	Aluminum	Electroless Nickel
MT		Ni-PTFE 1000 Hour Grey™ Nickel Fluorocarbon Polymer
NF		Cadmium, Olive Drab over Electroless Nickel
ZN		Zinc-Nickel, Olive Drab
ZR		Zinc-Nickel, Black - RoHS
ZL	Stainless Steel	Electro-Deposited Nickel

Table II: Capacitor Array Code Capacitance Range

Class	Pi - Circuit (pF)	C - Circuit (pF)
A	38,000 - 56,000	19,000 - 28,000
B	32,000 - 45,000	16,000 - 22,500
C	18,000 - 33,000	9,000 - 16,500
D	8,000 - 12,000	4,000 - 6,000
E	3,300 - 5,000	1,650 - 2,500
F	800 - 1,300	400 - 650
G	400 - 600	200 - 300
J	70 - 120	35 - 60

MIGHTY MOUSE FILTER CONNECTOR, DUAL-FLANGE JAM NUT RECEPTACLE

How To Order	
Sample Part Number	240-805- 18 M 8-7 P P P A A
Filter Connector	Series 805 Mighty Mouse
Shell Style	18 = Jam nut receptacle with PCB contacts
Shell Material/Finish	See Table I
Insert Arrangement	See pages C-3 - C-7
Contact Gender	P = Pin S = Socket
Termination Type	P = PC Tail
Filter Type	P = Pi Circuit C = C Circuit (See Note 1)
Capacitance	See Table II
Alternate Key Position	A, B, C, D, E, F, U A = Normal, U = Universal (See page C-2)

Notes

- Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available, please consult the factory.

Dimensions in inches (millimeters) and are subject to change without notice.

240-805-18
Series 805 Mighty Mouse Filter Connector
Receptacles with Triple-Start ACME Coupling Threads

Table I: Connector Class

Micro-D Filter Connectors

For land, sea, and space applications where guaranteed performance is an absolute mission requirement

Glenair Filter Micro-D connectors are low-pass filters, transmitting DC and low frequency signals while attenuating unwanted high frequency noise. These connectors are available with C filter elements or Pi filters. The filter substrates are constructed with a ceramic planar capacitor array.

Glenair Filter Micro-D's meet the demanding performance requirements of MIL-DTL-83513, except for a reduction in the dielectric withstanding voltage rating to 250 volts DC (higher voltages available on request). The TwistPin contact system assures superior performance in the most demanding applications. Glenair offers the broadest selection of high-availability catalog Micro-D filter connectors, including standard density, high density, mixed power and signal, and more.

Micro-D Filter Connectors General Information

ABOUT MICRO-D FILTER CONNECTORS

Glenair Filter Micro-D connectors are low-pass filters, transmitting DC and low frequency signals while attenuating unwanted high frequency noise. These connectors are available with C filter elements or Pi filters. The filter substrates are constructed with a ceramic planar capacitor array.

Glenair Filter Micro-D's meet the demanding performance requirements of MIL-DTL-83513, except for a reduction in the dielectric withstanding voltage rating to 250 volts DC (higher voltages available on request). The TwistPin contact system assures superior performance in the most demanding applications.

C Filter

Single capacitor with low self inductance. This configuration is generally used to attenuate high frequency signals. The simple design allows high-frequency EMI to discharge to ground via the surrounding electromagnetic field. C filters occupy the least amount of space and offer lower cost compared to other filter types.

Pi Filter

Dual capacitors with a ferrite inductor positioned between them. The Pi filter provides excellent high-frequency performance due to its sharper rolloff.

D

Micro-D C Filter Attenuation and Capacitance Values

C Filter	Filter Class	Capacitance pF	No Load Insertion Loss (dB Minimum)			
			1 MHz	10 MHz	100 MHz	500-1000 MHz

Micro-D Filter Connectors General Information

Micro-D
MIL-DTL-83513 Type

Micro-D Filter Connector Contact Arrangements (Face View Pin Connector)

* Consult factory for filtered Micro-D connectors in other arrangements

Performance Specifications	
Current Rating	3 AMP
Dielectric Withstanding Voltage	250 VDC
Working Voltage	100 VDC
Insulation Resistance	5000 Megohms Minimum
Contact Resistance	8 milliohms Maximum
Low Level Contact Resistance	32 milliohms Maximum
Magnetic Permeability	2 μ Maximum
Operating Temperature	-55° C to +125° C
Shock	50 g.
Vibration	20 g.
Mating Force	(10 oz) x (# of Contacts)
Capacitance and Attenuation	(See Table on Preceding Page)

Materials and Finishes	
Connector Shell	Aluminum Alloy 6061 or Stainless Steel, 300 Series, Passivated. See Ordering Info for Aluminum Plating Options.
Insulator	Liquid Crystal Polymer (LCP)
Seals	Fluorosilicone Rubber, Blue
Pin Contact	Beryllium Copper With 50 microinches Gold over Nickel Plating
Socket Contact	Copper Alloy With 50 microinches Gold Over Nickel Plating
Hardware	300 Series Stainless Steel
PCB Terminals	Gold-Plated Copper Alloy, Solder Dipped
Capacitors	Planar Ceramic Array
Inductors	Ferrite
EMI Ground Spring	Beryllium Copper, Gold Plated
Encapsulant	Thermally Conductive Epoxy

Dimensions in inches (millimeters) and are subject to change without notice.

Micro-D Filter Connectors Special Products

FILTER CONNECTORS FOR SPACE FLIGHT

Connector Material and Finish Options for Space Applications

- **Cadmium and silver plating are prohibited in space.**
- **Specify electroless nickel or gold for connector finish**

Some types of metals are prohibited for space flight. "Cadmium, zinc, chemically coated cadmium or zinc, or silver shall not be used as a connector or contact finish" (NASA EEE-INST-002: Instructions for EEE Parts Selection, Screening, Qualification, and Derating). NASA recommends electroless nickel or gold plating on connector shells and gold plating for contacts.

Outgassing

- **Standard filter connectors require thermal vacuum bakeout to meet outgassing requirements**
- **NASA screened filter connectors meet outgassing requirements**

Some flight equipment requires low-outgassing components in order to prevent degradation to optics and other sensitive instruments. The space industry has adopted a standardized test procedure, ASTM E595, to evaluate outgassing properties. In order to be considered outgassing compatible, a material must exhibit a total mass loss (TML) of less than 1.0% and a collected volatile condensable material (CVCM) of less than 0.1%. Some of the materials used in filter connectors, like fluorosilicone interfacial seals, must go through special processing to meet TML and CVCM requirements. Per EEE-INST-002, filter connectors subjected to +125° C as part of voltage conditioning do not require additional processing to meet the outgassing requirements. If processing is required, Glenair offers a 24 hour thermal vacuum outgassing at 125° C for filter connectors.

NASA Screening

- **"Mission critical" connectors for space flight should undergo rigorous 100% final inspection.**
- **Modification codes are available to invoke special screening.**

NASA recommends that connectors for space flight be specially screened. EEE-INST-002 contains three levels of screening: Level 1 for highest reliability with the lowest level of risk, Level 2 for high reliability with low to moderate risk, and Level 3 for standard reliability.

NASA Screening Levels and Modification Codes

NASA Screening Level	Screening	Screening & X-Ray Inspection
Level 1: Highest Reliability	Mod 429B	Mod 429R
Level 2: High Reliability	Mod 429	Mod 429S
Level 3: Standard Reliability	Mod 429L	Mod 429T

X-Ray Inspection

Real-Time X-Ray Machine

To reduce risk even further for mission critical applications, x-ray inspection on a real-time x-ray system is available. Samples subject to x-ray inspection per Mod code 844 will be screened for foreign object debris (FOD) and if applicable, broken strands. A minimum of two views for each sample will be stored and are available upon request.

Add the MOD codes listed in the table below to the end of a part number to invoke special test or processing requirements.

Thermal Vacuum Outgassing	Mod 186M
X-Ray Inspection	Mod 844

240-030 Micro-D Filter Connectors Solder Cup

Micro-D
MIL-DTL-83513 Type

Glenair Filtered Solder Cup Micro-D's provide EMI solutions in a miniaturized M83513 type connector. These connectors feature ceramic capacitor planar arrays and ferrite inductors. Solder cups accept #24 thru #30 AWG wire.

Choose Pi or C Filter Arrays in eight filter classes and six layouts. Glenair filtered Micro-D connectors comply with applicable MIL-DTL-83513 requirements and are 100% intermateable with standard connectors.

Choose 9 to 37 Contacts, with standard cadmium or nickel plating on the connector housing or choose optional finishes such as gold or chem film.

240-032 Pre-Wired Micro-D Filter Connectors Insulated Wire

Glenair Filtered Pigtail Micro-D's provide EMI solutions in a miniaturized M83513 Micro-D connector. These connectors feature ceramic capacitor planar arrays and ferrite inductors. Insulated wire is factory precision-crimped to TwistPin contacts for superior reliability in the most demanding environments.

Choose Pi or C Filter Arrays in eight filter classes and six layouts. Glenair filtered Micro-D connectors comply with applicable MIL-DTL-83513 requirements and are 100% intermateable with standard connectors.

Choose 9 to 37 Contacts, with standard cadmium or nickel plating on the connector housing or choose optional finishes such as gold or chem film.

240-033 Micro-D Pin-Socket In-Line Filter Adapters

Avoid Costly Redesign with Micro-D Filter Adapters. Upgrade your existing cables and boxes to meet EMI requirements. These pin-socket adapters can be plugged into any standard M83513 connectors. Simply unplug your existing cable, install the filter adapter, and plug the cable into the adapter.

In-Line Filter Adapters feature gold plated TwistPin contacts, machined aluminum shells, and either Pi or C filter elements. These environmentally sealed adapters are designed to meet the requirements of MIL-DTL-83513.

Notes

- Mounting holes fitted with 2x .086-56 threaded insert, .15 min thread. (T3585-02CPF129).
- Ground spring not available on cadmium plated assemblies.
- Interface dimensions per MIL-DTL-83513.
- Electrical performance:
I.R.: 5000 Megohms min at 100 VDC
D.W.V.: 200 VDC
- Assembly to be identified with Glenair's name, part number, date code, and pin 1 identification.

Materials / Finishes:

- Shell - Aluminum Alloy/See Chart
- Insulator - LCP/NA
- Contacts - Copper Alloy/Gold Plated
- Ground Spring - Stainless Steel/Gold Plated
- Socket Interfacial Seal: Fluorosilicone

240-077 Rear Panel Mount Micro-D Filter Connectors Insulated Wire

Glenair Filtered Insulated Wire Micro-D's provide EMI solutions in a miniaturized M83513 Micro-D connector. These connectors feature ceramic capacitor planar arrays and ferrite inductors. Insulated wire is factory precision-crimped to TwistPin contacts for superior reliability in the most demanding environments.

Choose Pi or C Filter Arrays in eight filter classes and six layouts. Glenair filtered Micro-D connectors comply with applicable MIL-DTL-83513 requirements and are 100% intermateable with standard connectors.

Choose 9 to 37 Contacts, with standard cadmium or nickel plating on the connector housing or choose optional finishes such as gold or chem film.

D

247-379 Edge Board Micro-D Filter Connector

Glenair Edge Board Micro-D Filter Connectors provide EMI solutions in a miniaturized M83513 Micro-D connector. These connectors feature ceramic capacitor planar arrays and ferrite inductors.

Choose Pi or C Filter Arrays in eight filter classes and six layouts. Glenair filtered Micro-D connectors comply with applicable MIL-DTL-83513 requirements and are 100% intermateable with standard connectors.

Choose 9 to 37 Contacts, with standard cadmium or nickel plating on the connector housing or choose optional finishes such as gold or chem film.

D

How To Order Edge Board Micro-D Filter Connector							
Sample Part Number	247-379	-2	-21	P	C	A	PN
Series	247-379						
Shell Finish	Aluminum Shell 1 - Cadmium 2 - Electroless Nickel 5 - Gold						
Contact Layout	9, 15, 21, 25, 31, 37 (See Table II)						
Contact Type	P - Pin S - Socket						
Filter Type	C - C Filter P - Pi Filter N - No Filter						
Filter Class	A, B, C, D, E, F, G, N, J (See Table I)						
Hardware Option (See Note 1)	NN - No Jackpost, No Threaded Insert PN - Jackpost, No Threaded Insert NU - Threaded Insert Only, No Jackpost (see Table III)		Rear Panel Mount Jackpost: R2U - 0.031" (0.6) Panel R3U - 0.047" (1.2) Panel R4U - 0.062" (1.6) Panel R5U - 0.094" (2.4) Panel R6U - 0.125" (3.2) Panel			Jackscrew Option: M - Hex Head Jackscrews S - Slot Head Jackscrews (see Table IV)	

Table I: Micro-D Filter Classes and Performance								
Filter Class	A	B	C	D	E	F	G	J
Capacitance (pF)								
C Filter	19000-28000	16000-22500	9000-16500	4000-6000	1650-2500	400-650	200-300	35-60
Pi Filter	38000-56000	32000-45000	18000-33000	8000-12000	3300-5000	800-1300	400-600	70-120

Notes

- PC tail configuration intended for use with .062 board thickness
- Electrical Performance:
 - Insulation Resistance: 5000 megohms Min at 100 VDC
 - Dielectric Withstanding Voltage: 200 VDC

Materials / Finishes:

- Shell - Aluminum Alloy/See Chart
- Insulator - LCP/NA
- Contacts - Copper Alloy/Gold Plated
- Ground Spring - Stainless Steel/Gold Plated
- Socket Interfacial Seal: Fluorosilicone

2470-1048 Combo Micro-D Filter Connector for Power Applications

2470-1048 Combo Micro-D Filter Connectors combine the size and weight advantages of a Micro-D connector with the added ability to handle higher power needs. Available in C filter configurations, with solder cup contact termination, PC tails or pre-wired.

D

Notes

- Electrical Performance:
 - Insulation Resistance: 5000 megohms Min at 100 VDC
 - Dielectric Withstand Voltage: 250 VDC
 - Capacitance: pins A, B, C, D, 3, 5, 9 and 12 to be 38–56 nF Pi filter (filter class A). All remaining signal lines are fitted with dummy contacts with no termination.
 - Signal current rating: 3 Amps Max
 - Power current rating: 7.5 Amps Max
- Assembly to be identified with Glenair's name, part number and date code space permitting.

Materials / Finishes:

- Shell - Aluminum Alloy/See Chart
- Insulator - LCP/NA
- Contacts - Copper Alloy/Gold Plated
- Ground Spring - Stainless Steel/Gold Plated
- Socket Interfacial Seal: Fluorosilicone

249-EMITS-MICRO EMITS EMI Troubleshooter Micro-D Edition

Micro-D
MIL-DTL-83513 Type

EMITS is designed for fast troubleshooting of EMI issues. Reduce time and money spent at test labs debugging EMI problems with this portable kit. Lightweight, high-strength anodized aluminum case comes supplied with low, medium, and high capacitance filters in size 9 through 37 position Micro-Ds, and a hand-held LCR meter.

How To Order EMITS

SERIES 240

M24308 Type D-Sub and HiPer-D Filter Connectors

MIL-DTL-24308 intermateable filter connectors with advanced environmental/shielding performance

The Glenair Series 28 HiPer-D connector is intermateable and intermountable with standard M24308 type D-Subs, and meets the need for improved performance in hostile environments. Unlike standard M24308 connectors with stamped steel shells, the HiPer-D is precision-machined from aluminum or stainless steel. The dielectric inserts are made with thermoset epoxy for improved resistance to chemicals and are capable of withstanding 200°C continuous operating temperature. Aerospace-grade fluorosilicone grommets and face seals provide watertight sealing. Integrated grounding fingers provide superior electromagnetic compatibility. Best of all, the HiPer-D is available in every standard and high-density M24308 layout as well as combo layouts integrating power and shielded contacts. Like all Glenair high-performance solutions, HiPer-D is stocked for immediate same-day shipment.

D-Subminiature Filter Connector Solder Cup / Straight PCB Contacts

How To Order Filter D-Subminiature Connectors									
Sample Part Number	240-021	S	-15	S-	JF	P	G	B	-S
Series	240-021								
Contact Density	S - Standard H - High								
Number of Contacts	9, 15, 25, 26, 37, 44, 50, 62, 78, 104 (See Table II)								
Contact Type	P - Pin S - Socket (See Table I)								
Shell Material/Finish	Aluminum Shell ME - Electroless Nickel JF - Yellow Cadmium MT - Nickel-PTFE Z2 - Gold E - Chem Film			Brass Shell GS - Gold					
Filter Type	C - C Filter P - Pi Filter (See Table I)								
Filter Class	A, B, C, D, E, F, G, J (See Table I)								
Hardware Options	B - No Hardware C - 4-40 Clinch Nut								
Termination Type	P - PC Tails S - Solder Cups								

E

Class	Pi - Circuit (pF)	C - Circuit (pF)
A	38,000 - 56,000	19,000 - 28,000
B	32,000 - 45,000	16,000 - 22,500
C	18,000 - 33,000	9,000 - 16,500
D	8,000 - 12,000	4,000 - 6,000
E	3,300 - 5,000	1,650 - 2,500
F	800 - 1,300	400 - 650
G	400 - 600	200 - 300
J	70 - 120	35 - 60

Notes

1. Assembly to be identified with Glenair's name, part number, and date code space permitting
2. Electrical Performance:
 Dielectric Withstanding Voltage: 500 VDC
 Insulation Resistance: 5,000 megohms @ 200 VDC
 Current Rating Standard Density: 7.5 Amps max.
 Current Rating High Density: 5 Amps max.
3. Dimensions B and D taken from inside of shell for Pin/Plug and outside for Socket/ Receptacle

Materials/Finishes:

Insulators - High Grade Rigid Dielectric/N.A.
 Contacts - Copper Alloy/Gold Plated

Dimensions in inches (millimeters) and are subject to change without notice.

Notes

1. Assembly to be identified with Glenair's name, part number, and date code space permitting
2. Electrical Performance: C filter
Capacitance: 80 – 120 nF
Dielectric Withstanding Voltage: 500 VDC
Insulation Resistance: 5,000 Megohms @ 200 VDC

Materials/Finishes:

Shell - Aluminum/Yellow Chromate over Cadmium (JF)
Insulators - High Grade Rigid Dielectric / NA
Contacts - Copper Alloy / Gold Plated
Hardware - Stainless Steel/Passivated
Interfacial Seal - Fluorosilicone Blend / NA

Dimensions in inches (millimeters) and are subject to change without notice.

SERIES 970
HIGH AMPACITY,
HARSH ENVIRONMENT

PowerTrip™

*The power connector
for extreme environments—Now
available EMI/EMP filter class*

Protect circuits with Series 970 PowerTrip™ connectors

The Series 970 PowerTrip connector fills the need for a military-grade harsh environment power connector with improved mechanical, environmental and electrical performance. PowerTrip™ also delivers reduced size and weight compared to lower-density 5015 type power connectors. Featuring triple-start mating threads, crimp rear-release contacts, upgraded finish choices and improved EMI protection, the PowerTrip™ connector is ideal for power distribution units, hybrid electric drives, motors, and other high current, high-reliability applications. Available EMI/EMP filter receptacles are rated to 1,250VDC DWV and supplied with solder cups for easy termination and installation.

240-970W FILTER RECEPTACLE, SQUARE FLANGE

Series 970 PowerTrip™ filter receptacles feature planar array ceramic capacitors. Solder cup contacts are factory-installed, epoxy sealed and are non-removable. Socket contacts have copper alloy louverband spring for multiple points of electrical contact. Coupling threads are triple-start ACME type. Contacts are gold plated. Fluorosilicone rubber face seal on pin connector. Aluminum or stainless steel shell.

ULTRAMINIATURE

Series 79 Filter Connectors

The ultraminiature rectangular with advanced environmental performance—now available in EMI/EMP filter class

The Glenair Series 79 Micro-Crimp is the rectangular version of our high-density and ultralightweight Series 80 Mighty Mouse circular. Like the Mighty Mouse, the Series 79 Micro-Crimp offers crimp, PCB, fiber optic, power, shielded, as well as pneumatic contact arrangements. Precision-machined aluminum shells are sealed to IP67. High density #23 contact arrangements are set on .076" centers and are available in over 30 tooled arrangements from 5 – 102 contacts. Integrated ground spring provides improved EMC performance. New EMI/EMP filter class connectors are available in 35 – 240,000 pF capacitance in both C and Pi architectures. All configurations are environmentally sealed for rugged applications including military aerospace.

Series 79 Filtered Receptacle
Rear Panel Mount with Straight PC Tails

How To Order Filter Series 79 Connectors

Sample Part Number	240-790-028	P	H-66	ME	P	D	P	A
Series	240-790-028							
Contact Type	P - Pin Contacts							
Insert Arrangement	(See Table I)							
Shell Material/Finish	Aluminum Shell ME - Electroless Nickel MT - Nickel-PTFE E - Chem Film Z2 - Gold UC - Zinc Cobalt with Black Chromate J - Cadmium with Yellow Chromate NF - Cad/O.D. over Electroless Nickel							
Filter Type	C - C Filter P - Pi Filter							
Filter Class	X, Y, Z, A, B, C, D, E, F, G, J (See Table II)							
Mating Hardware Options	P - Jackposts G - Male Guide Pins S - Female Guide Sockets N - No Mating Hardware (See Table III)							
PC Tail Length	A - .125" (3.18) B - .250" (6.35) C - .375" (9.53)							

Notes

1. Assembly to be identified with Glenair's name, part number, and date code, space permitting
2. EMI Filtered receptacle connector designed to meet requirements of MIL-STD-2120 and Glenair Series 79 specifications. Unless otherwise specified herein, refer to Glenair specification 799-008 for additional performance characteristics.
3. All contacts to have identical filter value. Other filter arrangements available, contact factory
4. See pages G-26 to G-31 for PCB hole patterns
5. Dielectric Withstanding Voltage: 500 VDC (Filter Class X, Y, Z are 250 VDC)
6. Insulation Resistance:
5,000 MEGOHMS min @ 200VDC for Class A, B, C, D, E, F, G & J.
1,000 MEGOHMS @ 83VDC for classes, X, Y, & Z
7. Current Carrying Capacity
23 Gage - 5 Amps max. for all layouts
16 Gage - 7.5 Amps max. for combo layouts / 13 Amps max. for all-power layouts
12 Gage - 13 Amps max. for combo layouts / 23 Amps max. for all-power layouts
8. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available. Please consult factory with your requirements.

Materials/Finishes:

Insulators - High Grade Rigid Dielectric / N.A.
 Interfacial Seal - Fluorosilicone Elastomer / N.A.
 Contacts - Copper Alloy / 50 microinches Gold over Nickel
 Mating Hardware - 300 Series Stainless Steel / Passivated
 EMI Gasket - Silver-Filled Fluorosilicone, CHO-SEAL 1287

Dimensions in inches (millimeters) and are subject to change without notice.

How To Order Filter Series 79 Connectors

Sample Part Number	240-790-044	S	H-66	ME	E	P	D	P	A
Series	240-790-044								
Contact Type	S - Socket Contacts								
Insert Arrangement	(See Table I)								
Shell Material/Finish	Aluminum Shell ME - Electroless Nickel MT - Nickel-PTFE E - Chem Film Z2 - Gold UC - Zinc Cobalt with Black Chromate J - Cadmium with Yellow Chromate NF - Cad/O.D. over Electroless Nickel								
EMI Spring	E - With EMI Spring N - No EMI Spring								
Filter Type	C - C Filter P - Pi Filter								
Filter Class	X, Y, Z, A, B, C, D, E, F, G, J (See Table II)								
Mating Hardware Options	P - Jackposts N - No Mating Hardware (See Table III)								
PC Tail Length	A - .125" (3.18) B - .250" (6.35) C - .375" (9.53)								

Notes

1. Assembly to be identified with Glenair's name, part number, and date code, space permitting
2. Ground spring is not compatible with Zinc Cobalt or Cadmium platings. Ground spring is only available with Nickel, Teflon Nickel, Gold, or Chem Film plating on the shell.
3. EMI Filtered plug connector designed to meet requirements of MIL-STD-2120 and Glenair Series 79 specifications. Unless otherwise specified herein, refer to Glenair specification 799-008 for additional performance characteristics.
4. All contacts to have identical filter value. Other filter arrangements available, contact factory
5. See pages G-32 to G-37 for PCB hole patterns
6. Dielectric Withstanding Voltage: 500 VDC (Filter Class X, Y, Z are 250 VDC)

7. Insulation Resistance:

5,000 MEGOHMS min @ 200VDC for Class A, B, C, D, E, F, G & J.
1,000 MEGOHMS @ 83VDC for classes, X, Y, & Z

8. Current Carrying Capacity

23 Gage - 5 Amps max. for all layouts
16 Gage - 7.5 Amps max. for combo layouts / 13 Amps max. for all-power layouts
12 Gage - 13 Amps max. for combo layouts / 23 Amps max. for all-power layouts

9. Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available. Please consult factory with your requirements.

Materials/Finishes:

Insulators - High Grade Rigid Dielectric / N.A.
Contacts - Copper Alloy / 50 microinches Gold over Nickel
Mating Hardware - 300 Series Stainless Steel / Passivated

Dimensions in inches (millimeters) and are subject to change without notice.

D	8,000 - 12,000	4,000 - 6,000
E	3,300 - 5,000	1,650 - 2,500
F	800 - 1,300	400 - 650
G	400 - 600	200 - 300
J	70-120	35-60

* Filter Classes X, Y and Z are 250 VDC. All others are 500 VDC
 † Class X filters not available for insert arrangements with 3 or more rows of contacts

Table III: Hardware Option

N No Mating Hardware		Connector supplied with blind tapped holes. .150" (3.8 mm) minimum depth. Shell size M has #8-32 UNC-2B thread. Shell sizes H and L have #6-32 UNC-2B thread. All other sizes have #4-40 UNC-2B thread.
P Jackposts		Connector is supplied with non-removable stainless steel jackposts. Shell size M has 6-32-UNC thread. Shell sizes H and L have #4-40 UNC-2B thread. All other sizes have #2-56 UNC-2B thread.

How To Order Filter Series 79 Connectors	
Sample Part Number	240-790-071 P H-66 ME P D P
Series	240-790-071
Contact Type	P - Pin Contacts
Insert Arrangement	(See Table I)
Shell Material/Finish	Aluminum Shell ME - Electroless Nickel MT - Nickel-PTFE E - Chem Film Z2 - Gold UC - Zinc Cobalt with Black Chromate J - Cadmium with Yellow Chromate NF - Cad/O.D. over Electroless Nickel
Filter Type	C - C Filter P - Pi Filter
Filter Class	X, Y, Z, A, B, C, D, E, F, G, J (See Table II)
Mating Hardware Options	P - Jackposts G - Male Guide Pins S - Female Guide Sockets N - No Mating Hardware (See Table)

Notes

- Assembly to be identified with Glenair's name, part number, and date code, space permitting
- EMI Filtered receptacle connector designed to meet requirements of MIL-STD-2120 and Glenair Series 79 specifications. Unless otherwise specified herein, refer to Glenair specification 799-008 for additional performance characteristics.
- All contacts to have identical filter value. Other filter arrangements available, contact factory
- Dielectric Withstanding Voltage: 500 VDC (Filter Class X, Y, Z are 250 VDC)
- Insulation Resistance:
5,000 MEGOHMS min @ 200VDC for Class A, B, C, D, E, F, G & J.
1,000 MEGOHMS @ 83VDC for classes, X, Y, & Z

- Current Carrying Capacity
23 Gage - 5 Amps max. for all layouts
16 Gage - 7.5 Amps max. for combo layouts / 13 Amps max. for all-power layouts
12 Gage - 13 Amps max. for combo layouts / 23 Amps max. for all-power layouts
- Other filter styles (C-L, L-C, Unbalanced Pi, Multi-Stage, Multi-Value) are available. Please consult factory with your requirements.

Materials/Finishes:

Insulators - High Grade Rigid Dielectric / N.A.
Interfacial Seal - Fluorosilicone Elastomer / N.A.
Contacts - Copper Alloy / 50 microinches Gold over Nickel
Mating Hardware - 300 Series Stainless Steel / Passivated
EMI Gasket - Silver-Filled Fluorosilicone, CHO-SEAL 1287

Dimensions in inches (millimeters) and are subject to change without notice.

ARINC Filter Connectors

Fast, reliable in-house manufacturing

Glenair manufactures a full range of ARINC 600 filter connectors for use in EMC/EMP management of electronic systems and interconnect cabling. All connectors are designed in accordance with the ARINC 600 specification, and are designed to mate with ARINC 600 plugs with the same insert configuration and opposite contact gender. Planar filter arrays and TVS diodes may be integrated into both standard catalog as well as build-to-order configurations. Glenair's state-of-the-art diode burn-in process tests leaded and surface mount diodes with leakage current monitored throughout the entire test procedure ensuring field reliability.

Notes

- Glenair ARINC 600 receptacle is designed to mate with COTS ARINC 600 plug IAW ARINC 600 specification with the same insert configuration
- Material/Finish:
Shell: Aircraft Grade Aluminum
Insulators: High Grade Rigid Dielectric
PC Tail and Solder Cup Contacts: Copper Alloy/Gold over Nickel
- Assembly to be permanently identified with (space permitting) Glenair, part number, cavity and contact location, and date code.
- Insert arrangement in accordance with ARINC 600 (arrangement shown for reference only)
- EMI filter receptacle connector designed to meet requirements of MIL-STD-2120 and ARINC 600.
- Electrical Parameters:
Working Voltage - 200 VDC, 115 VAC 400Hz
Dielectric Withstanding Voltage (DWV) - 500 VDC
Insulation Resistance (IR) - 5000 Megohms min at 200 VDC
- Custom filter types available (consult factory).
- Additional mounting features available (consult factory).
- Environmental compatibility features:
Single piece shell to limit any contaminants or moisture ingress due to post-processing such as solder wash.
Termination area sealed via o-rings around each module.
Termination may utilize sealing compound to further aid in environmental compatibility

TVS Filter Connectors

Configurable, fast-turnaround, catalog transient voltage suppression filter connectors

Glenair is the only manufacturer in the high-performance interconnect industry to offer transient voltage suppression interconnects as a fast-turnaround catalog item. These configurable TVS devices prevent catastrophic EMP failure in military and commercial aircraft for both EMP (electromagnetic pulse) as well as lightning protection. Lightweight and small form-factor designs save space and weight. Available configurations include D38999 type receptacles, plugs, and go-between adapters. All available versions may be custom configured to meet specific voltage, wattage, and clamping time requirements. Glenair catalog TVS connectors are designed in accordance with MIL-DTL-38999 electrical, mechanical, and environmental requirements, and mate with appropriate shell size and opposite contact gender connectors.

D38999 SERIES III TYPE TVS ADAPTER

How To Order								
Sample Part Number	242-383	A	-XXXX	NF	19-11	PS	N	N
TVS Connector	MIL-DTL-38999 Series III							
Shell Style	A = Adapter							
Diode Net List	Assigned by Glenair. See Table V							
Connector Class	See Table II							
Insert Arrangement	IAW MIL-STD-1560							
Contact Gender	PS = Pins, Plug Side SP = Sockets, Plug Side							
Flange Mounting Style	N = Not Applicable							
Alternate Key Position	A, B, C, D, E, N = Normal, U = Universal (Do not mate Universal with Universal)							

Notes

- Materials/Finishes: Shell Housing & Coupling Nut: See Table II
Ground Spring: Beryllium Copper Alloy/Electroless Nickel
Insulators: High grade rigid dielectric
Seals: Fluorosilicone
Contacts: Copper Alloy/Gold over Nickel per ASTM B 488
- Assembly to be identified with Glenair's name, part number, and date code - space permitting.
- Insert Arrangement in accordance with MIL-STD-1560. (Arrangement shown for reference only)
- Electrical Performance: Specific diode voltage code options per Table III. Diode wattage based on 10 x 1000 uS peak pulse power waveform.
Clamping Time: Less than 1 picosecond, 0V to min. breakdown.
- Glenair will assign a diode net list code and provide a separate net list drawing containing specific electrical requirements. Fill out applicable columns of Table V and return.
- Consult factory for low capacitance, ground requirements, power ratings above 5000W, special test requirements, or other modifications.
- Operating temperature: -55°C to +150°C

Dimensions in inches (millimeters) and are subject to change without notice.

D38999 SERIES III TYPE TVS PLUG WITH SOLDER CUP CONTACTS

How To Order									
Sample Part Number	242-383	P	-XXXX	NF	19-11	P	S	N	N
TVS Connector	MIL-DTL-38999 Series III								
Shell Style	P = Plug								
Diode Net List	Assigned by Glenair. See Table V								
Material and Finish	See Table II								
Insert Arrangement	IAW MIL-STD-1560								
Contact Gender	P = Pin S = Socket								
Termination	S = Solder Cup								
Flange Mounting Style	N = Not Applicable								
Alternate Key Position	A, B, C, D, E, N = Normal, U = Universal (Do not mate Universal with Universal receptacle)								

Notes

- Materials/Finishes: Shell Housing & Coupling Nut: See Table II
Ground Spring: Beryllium Copper Alloy/Electroless Nickel
Insulators: High grade rigid dielectric
Seals: Fluorosilicone
Contacts: Copper Alloy/Gold over Nickel per ASTM B 488
- Assembly to be identified with Glenair's name, part number, and date code - space permitting.
- Insert Arrangement in accordance with MIL-STD-1560. (Arrangement shown for reference only)
- Electrical Performance: Specific diode voltage code options per Table III. Diode wattage based on 10 x 1000 uS peak pulse power waveform.
Clamping Time: Less than 1 picosecond, 0V to min. breakdown.
- Glenair will assign a diode net list code and provide a separate net list drawing containing specific electrical requirements. Fill out applicable columns of Table V and return.
- Consult factory for low capacitance, ground requirements, power ratings above 5000W, special test requirements, or other modifications.
- Operating temperature: -55°C to +150°C

Dimensions in inches (millimeters) and are subject to change without notice.

SERIES 245

Mighty Mouse Breakout Board

Rugged, reliable performance for on-site testing

The Glenair small form-factor 245-805 Mighty Mouse Breakout Board allows fast and reliable monitoring / testing of Unit Under Test (UUT) circuits and contacts during operation. The breakout board, equipped with switch technology instead of fragile plastic jumpers, is inserted between the UUT and the interconnect cable assembly to facilitate accurate debugging of intermittent failures / abnormal transient signals. Each breakout board is supplied with a rugged overmolded cordset that ensures test board durability in both laboratory and on-site testing.

- Switches offer improved durability and reliability over plastic jumpers
- .080" test points
- Circuit board is secured in a metal shell for strength and stability
- Supplied with a cable assembly to facilitate on-site testing
- Available for the complete range of Series 805 Mighty Mouse insert arrangements

245-805 Mighty Mouse Breakout Board

Series 245 Breakout Board Performance Specifications	
Temperature Rating	-30°C to +85°
Current Rating	5A Max
DWV	300 VDC
Insulation Resistance	5 Gigohms Min @ 200 VDC
Note: Although the PCB traces and components used are capable of withstanding high voltage/current, use caution to avoid exposure to any lethal levels. Not intended for handheld use at voltages above 33 VRMS/70 VDC.	

Material/Finish

- Connector Seals - Fluorosilicone
- Connector Contacts - Copper Alloy/Gold Over Nickel per ASTM B488
- Housing - Aluminum Alloy/Black Anodized
- Circuit Board - FR4 Epoxy Glass/Gold or HASL Plated Solder Pads
- Test Probe Contact - Copper Alloy/Silver Plating
- Hardware - Stainless Steel/Passivated
- Feet - Thermoplastic 75 Durometer

Notes:

- Standard breakout boards do not contain current limiting or current protection devices. It is the user's responsibility to limit current. Consult factory with custom requirements, including TVS diode protection or in-line resistors.
- Optional cordset supplied standard with plug/plug configuration—pin contacts on one side and socket contacts on the other.

Dimensions in inches (millimeters) and are subject to change without notice.

SERIES 240

Conductive Gaskets and Accessories

Key elements in every interconnect system designed for optimal EMC performance

Designers of interconnect cable systems have a responsibility to manage potential sources of electromagnetic interference. This includes shielding electronic boxes to prevent the emission of EMI from electronic system components, as well as shielding interconnect cabling to prevent interference from grounding to wire circuits. Key technologies in EMC design include conductive panel gaskets, connector o-rings, and conductive braided cable shielding. Backshells used as cable shield termination devices are also critical components in a well-designed interconnect system. Glenair is the world's largest manufacturer and supplier of EMC connector accessories, EMI/RFI braided shielding, and the assembly tools required for proper installation and use of these technologies. This section of the catalog introduces just a few of the more important accessory elements in systems designed for EMC. For information on other products of this type, please consult the factory or see www.glenair.com.

Band-Master™ ATS Manual Tools and Bands

MANUAL BANDING TOOL FOR STANDARD BANDS

For Standard Bands 601 -005, -040, and -049

The 601-100 Standard Band-Master™ ATS Tool weighs 1.18 lbs., and is designed for standard flat .24" width clamping bands (601-005, 601-040 and 601-049) in a tension range from 100 to 180 lbs. Calibrate at 150 lbs. ± 5 lbs. for most shield terminations. Tool and band should never be lubricated.

Color-coded tensioning lever:
black = standard

Band-Master™ ATS Band Selection

Cable Pull Strength for Standard Bands

Name	Material Type	Band Width	Material Thickness	Tool Setting	Cable Pull Strength
Standard	304 SS	0.24"	.020"	150 lbs	160 lbs

Dimensions in inches (millimeters) and are subject to change without notice.

STANDARD BANDS

**Short Flat 601-005
Short Precoiled 601-006**

Standard bands are precision constructed of 300 Series SST/Passivate. Short standard bands are 9.00 inches (228.6) in length and designed for use with the Band-Master™ ATS 601-100 manual banding tool or the 601-104 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately 1.0 inches (25.4).

**Medium Flat 601-040
Medium Precoiled 601-041**

Standard bands are precision constructed of 300 Series SST/Passivate. Medium standard bands are 14.0 inches (355.6) in length and designed for use with the Band-Master™ ATS 601-100 manual banding tool or the 601-104 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately 1.8 inches (45.7).

**Long Flat 601-049
Long Precoiled 601-050**

Standard bands are precision constructed of 300 Series SST/Passivate. Long standard bands are 18.0 inches (457.2) in length and designed for use with the Band-Master™ ATS 601-100 manual banding tool or the 601-104 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately 2.5 inches (63.5).

Dimensions in inches (millimeters) and are subject to change without notice.

Band-Master™ ATS Manual Tools and Bands

MANUAL BANDING TOOL FOR MICRO BANDS

For Micro Bands 601 -024, -060, and -064

The **601-101 Micro Band-Master™ ATS Tool** weighs 1.18 lbs., and is designed for micro .120" width clamping bands (601-024, 601-060 and 601-064) in a tension range from 50 to 85 lbs. Calibrate at 80 lbs ±5 lbs. for most shield terminations. Tool and band should never be lubricated.

Color-coded tensioning lever:
blue = micro

MICRO BANDS

Short Flat 601-024

Short Precoiled 601-025

Micro Bands are precision constructed of 300 Series SST. Short micro bands are 5.00 inches (127) in length and designed for use with the Band-Master™ 601-101 hand banding tool or the 601-105 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately .5 inches (12.7).

Medium Flat 601-060

Medium Precoiled 601-061

Micro Bands are precision constructed of 300 Series SST. Medium micro bands are 8.00 inches (203.2) in length and designed for use with the Band-Master™ 601-101 hand banding tool or the 601-105 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately .88 inches (22.4).

Long Flat 601-064

Long Precoiled 601-065

Micro Bands are precision constructed of 300 Series SST. Long Micro Bands are 14.00 inches (355.6) in length and designed for use with the Band-Master™ 601-101 hand banding tool or the 601-105 pneumatic banding tool. Bands should always be double wrapped and will accommodate diameters up to approximately 1.88 inches (47.7).

Dimensions in inches (millimeters) and are subject to change without notice.

Practical Solutions for Electromagnetic Compatibility

Designing interconnect systems which deliver clean data streams, undistorted by electromagnetic interference or pulses (EMI/EMP) is an enormous challenge. Electromagnetic Compatibility (EMC) requirements have been established to ensure that the performance of an individual electronic device is not degraded due to its proximity to high-frequency electromagnetic interference, and also to prevent the device itself from becoming a potential source of EMI. Sensitive electronic devices also need to be protected from voltage spikes generated during transient states or static discharges in the overall system.

Protecting sensitive devices and achieving electromagnetic compatibility in an interconnect environment, such as an aircraft avionics bay, is typically achieved through the application of EMI/EMP screening, grounding and filtering technologies. Interconnect industry techniques for achieving effective EMC include:

- Reflecting the signals outright,
- Reducing line-of-sight entry points in equipment and cable shields,
- Absorbing the interference in permeable material and dissipating it as heat,
- Conducting the EMI along the skin of the device/cable and taking it to ground,
- Filtering out interference at the point of interconnection, using specialized connectors which provide EMI suppression, and/or,
- Adding transient voltage suppression diodes to clamp voltage spikes.

In most applications, EMI management is not accomplished through the use of a single technique such as filtering, but rather through the combined use of various EMC technologies. While black box device manufacturers may incorporate a filter connector as a universal prophylactic against future, unknown levels of EMI, the final integration of the device into a

complex application environment typically requires the use of additional EMC technologies. At the most practical level this includes grounding conductively plated equipment housings with studs and straps, shielding cable conductors with metallic braiding, tape or conduit, and eliminating line-of-sight entry points through which electromagnetic waves can penetrate or escape the equipment. This later step is commonly performed by backshell devices which provide a reliable grounding platform for cable shielding and mechanically mask the conductor-to-contact termination from noisy waves of EMI.

Cross-sectional view of a Micro-D connector assembly optimized for EMI noise suppression. Note the use of braided shielding, shield termination band and EMI ground spring. Effective EMI noise suppression may be accomplished solely with the use of filter connectors, but many designers prefer to augment the noise suppression provided by filters with accessory hardware such as banding backshells, conductive gaskets, grounding studs and cable shielding.

The frequency of the interfering signal is a critical concern when selecting EMI shielding devices. Low frequency magnetic waves in the 1 to 30 KHz range, for example, are most effectively shielded by absorbing the signals in permeable material. High frequency signals (30 KHz and above) are most effectively shielded by reducing entry windows and by ensuring adequate surface conductivity to ground.

EMC Materials and Technologies

In interconnect cable assemblies, conductive wires and cables act as antennas to pick up and/or radiate noise. Cables can couple electrical or magnetic fields, or even radiated energy from another cable (known as “crosstalk”). The most basic of all material requirements is therefore to apply a conductive shielding around cable conductors to take electrical and magnetic field voltages to ground. Braided shielding provides the cable assembly with strength, durability and flexibility with just a slight sacrifice to effectiveness (compared to a solid conduit, conductive tape or other material). But at higher frequencies, braided shielding can lose effectiveness as the windows in the braid can become relatively large compared to the wavelength of the EMI. This is why other materials, such as metal-core conduit, conductive junction and equipment boxes, conductive gaskets, and so on also play important roles in EMC applications.

Many of the EMC materials and technologies supplied by Glenair are full-fledged product lines. Others are innovative techniques we can apply to a broad range of interconnect products. External and internal grounding springs are one such example. These gold-plated springs offer lower shell-to-shell resistance and are compatible with standard mating receptacles. Most of the connectors produced by Glenair can be equipped with grounding fingers for improved EMI shielding and grounding.

Most military grade interconnect devices and equipment housings are made of materials that accept conductive plating to provide some EMI protection outright and simultaneously facilitate grounding through the use of attached metallic or metallized textile studs and straps. While plated aluminum is the most common material for EMC applications, plated composite thermoplastic offers the ability to reduce weight and corrosion while still maintaining an effective ground path. The following section describes the many individual Glenair materials and technologies used for effective EMC.

Conductive Braided Shielding

Low frequency waves in the 1 to 30 kHz range can be absorbed into permeable conductive materials, such as shielding placed around individual conductors within a cable assembly or wire harness. This shielding material either captures the EMI taking it to ground or dissipates it as heat. Metallic braids and high-tech plated fabrics also shield cable conductors from line-of-sight penetration or escape, again by taking EMI to ground.

A wide range of cable shield termination technologies are available—the effectiveness of each style, and the complete shielding solution, can be measured using a transfer impedance test to evaluate the cable shield performance against electrostatic discharge and radiated emissions at various frequencies up to the gigahertz range. Shielding effectiveness can be calculated for a range of frequencies by taking the ratio of transfer impedance for an unprotected device or system compared to transfer impedance of a protected device or system, with the result expressed in decibels. Glenair cable shielding is manufactured in a wide range of designs and configurations. Materials include tin-plated copper, nickel-plated copper and tin-plated iron/copper. AmberStrand® is metallized composite thermoplastic material that matches metal shield performance at a fraction of the weight. Each material has specific performance advantages ranging from strength, to conductivity and corrosion protection.

Braided shields provide exceptional structural integrity while maintaining good flexibility and flex life. They also minimize low-frequency interference at audio and RF ranges. The material’s ability to contrib-

Dimensions in inches (millimeters) and are subject to change without notice.

ute to EMI reduction depends on the signal amplitude and frequency in relation to braid mesh count, wire diameter and material. Generally, the tighter the mesh and the higher the percentage of braid coverage, the more effective the shield is against high-frequency emissions. An alternative is to use more than one braid shield.

Metal Braid is offered in Tubular or Flat configurations in a variety of sizes from 1/32 inch (0.8 mm) to 2-1/2 inches (63.5 mm), and can easily be slipped over convoluted tubing and conduit as well as wire bundles, cables or similar constructions. Glenair's in-house braiding production capacity is truly impressive: More than 50 braiders, ranging from 16 to 96 carriers, provide the capability to produce large quantities of precise metal and non-metallic braid and expandable sleeving in tubular, tapered, and flat configurations.

An alternative to braided shielding, foil shields are made from aluminum laminated to a polyester or polypropylene film. Foil shields provide 100 percent cable coverage, improving protection against radiated emission and ingress at audio and radio frequencies. Because of their small size, foil shields are commonly used to shield individual pairs in multi-conductor cable to reduce crosstalk. Foil shields may also be bonded to a coaxial cable insulation or cable jacket with a layer of adhesive, allowing for faster, easier and more reliable termination.

Swing-Arm Shield Sock Backshells

The selection of an appropriate shield termination backshell depends on many factors, including ease of assembly, cost, repairability, shield type and construction, cable diameter and type, cable jacket thickness, weight and corrosion resistance. Often the choice boils down simply to customer preference, although certainly cable construction, i.e., type of shielding and other mechanical factors is the most significant technical consideration.

As there is no single shield termination technology or methodology that will meet every customer requirement, Glenair supports every popular shield termination method with the full range of sizes and materials. Currently Glenair is able to produce an innovative backshell product, called the Swing-Arm that resolves a significant number of

design problems—including EMC. The composite thermoplastic Swing-Arm features an integrated EMI shield sock and configurable cable clamp—available with nickel/copper, tinned copper, metal-clad stainless steel or metallized composite thermoplastic shielding. The articulating arm can be configured to straight, 45° or 90° positions, reducing stock keeping requirements. The Swing-Arm also offers extremely fast, simple and trouble-free shield terminations.

Conical Ring Style Backshells

Glenair Series 38 and 39 EMI/RFI conical ring backshells provide reliable individual and overall shield termination by securing the shield under pressure between a conically shaped backshell and ground ring. Supplied in both environmental and non-environmental versions, this venerable backshell design accommodates both individual as well as overall shields and delivers low DC resistance across the termination area.

Dimensions in inches (millimeters) and are subject to change without notice.

Glenair Band-Master™ ATS

The unique low profile and smooth inside diameter of the Band-Master™ ATS steel clamping band virtually eliminates EMI leakage paths, providing reliable and repairable shield terminations. Cylindrical banding backshells are available for all Military Standard type connectors.

EMI/RFI Elliptical Banding Backshells

EMI Backshells provide shield termination as well as strain relief and mechanical protection. One-piece or split elliptical shells are chosen for rectangular connectors when the wire bundle diameter is too big to fit in a circular cable entry.

EMI/RFI Braided Grounding Straps

The opportunity to reduce weight and improve the flexibility and performance of grounding jumpers and straps has led many engineers to choose braided material configurations. Braided ground straps are typically supplied with either nickel-clad copper braid, or nickel-clad microfilament stainless steel braid (ArmorLite™). Ground lugs are fabricated from copper nickel plate per MIL-C-26074. The assemblies withstand flexure of 25,000 cycles and are current rated to a minimum of 50 amps.

Metal-Core Conduit

Glenair helically-wound metal conduit, overbraided with bronze, stainless steel or tinned copper shielding provides high levels of EMI protection across all radiation fields and frequencies. Metal-Core Conduit is the material of choice for TEMPEST secure communications and other applications involving sensitive electronic equipment and intense levels of EMI.

Dimensions in inches (millimeters) and are subject to change without notice.

EMI/EMP Filter Connector Overview

Filtering or suppression of electromagnetic noise within the connector package is reliably accomplished through the integration of capacitors, inductors and diodes into the connector to segregate interfering high-frequency or high voltage noise from the desired lower frequency signals. The capacitors strip off the interfering noise from the signal as it passes through the filter device. While various types of capacitor filters are available, perhaps the most widely applied is the Planar Array type. Planar Arrays are extremely effective at filtering high-frequency interference. Planar Array designs utilize ceramic capacitor arrays and ferrite inductors which externally surround each contact, and may be supplied in a single monolithic block to fit into any connector size or shape. Planar arrays may be fabricated with different capacitive values on individual pins for additional flexibility in achieving the desired level of EMC. Diodes are used to clamp the voltage below a certain value, thereby protecting the electronic circuitry. They are typically integrated into the connector using a small printed circuit board.

Ferrite elements and capacitors can be integrated into any connector package envelope.

Using filter technology has certain advantages to the electrical system engineer, most especially improved signal integrity as well as size and weight reduction. In addition, filters can be incorporated into an interconnect system late in the research and development process; for example after an unforeseen emission problem has been detected. In every filter application the signal levels and frequency bands must be well understood in order to select the appropriate mode or type of filter technology.

For example, electronic equipment used by avionic systems typically spans the electromagnetic spectrum from a few kilohertz to several gigahertz. At the low end, Omega Navigation, which is used to fix aircraft position within a network of ground based transmitters, operates in the frequency range of 10 to 14 KHz. VHF Omnidirectional Range Finders (VOR) are radio beacons used in point-to-point navigation. They operate from 108 to 118 MHz. Glideslope Systems used during landings operate in the 328 to 335 MHz range. Distance-Measuring Equipment (DME), which gauges the space between the aircraft and ground-based transponders operate at just over 1 GHz.

Clearly, potential EMI in the application environment described above covers a broad range of frequencies. Filter modes and types are consequently specified according to the EMI frequency ranges which are the source of the actual signal degradation and the operating frequency of the affected device. Certain electrical circuit criteria are also germane to filter selection, including:

- Capacitance Value
- Working Voltage
- Surge Voltage
- Dielectric Withstand Voltage
- Insulation Resistance
- Transient Protection

Introduction to Filter Connectors

EMI/EMP Filter Connector Overview

Filter connectors appropriate for use in applications such as those referenced above are broadly identified as 'low-pass' filters (i.e. they let low frequency signals pass through and attenuate higher frequencies). The attenuation curve can be shaped using different filter types (different configurations of capacitors and inductors). These types include: Pi Filter, L-C or C-L Filter, and C Filter. These filter connector types are characterized by their relative abilities to filter noise according to capacitance, voltage values and load impedances. The simplest design is the "C", which consists of a single capacitor inserted between the signal line and ground.

While most EMI filter connectors can be used in a working temperature environment from -55 to 125° C, selected designs are optimized for higher operating temperatures. Hermetic Filter connectors provide the ultimate protection—ensuring system hermeticity while the added filter/diode elements safeguard electrical signals passing through the connector.

Prior to shipping a filtered connector, Glenair offers extensive testing, qualification and burn-in options. Tests range from a simple capacitance (C), insulation resistance (IR), and dielectric withstanding voltage (DWV), to more elaborate options such as RF insertion loss, dissipation factor, Zener/TVS diode test, ground resistance, voltage conditioning and thermal shock.

The Glenair factory, provided with the system attenuation and frequency values, relevant electrical specifications, and connector configuration details can design an effective filter device for every application (to get started, use the application checklist on page M-2). Glenair is able to supply filter technology in every cylindrical connector standard we produce including our Series 80 Mighty Mouse as well as MIL-C-38999, MIL-C-5015, MIL-DTL-83513, MIL-C-24308, and so on. Custom circular and rectangular styles are also available. Hybrid electrical/optical filter connectors are a specialty.

Common Filter Connector Types

Glenair supplies filter connectors in the following electrical configurations: C, L-C, C-L, and Pi. The following general values may be used in type selection: Single element filter connectors sporting either a single capacitor or inductor yield an insertion loss characteristic of 20dB per decade, dual element filters (capacitor plus an inductor) 40dB per decade, and triple element filters 60dB per decade. Selection is based primarily on source and load impedances but may also be influenced by the level of attenuation required at various frequencies. Please consult the factory for assistance in evaluating insertion loss values. All insertion loss values quoted for a 50 Ohm impedance.

C Circuit Filter

Single capacitor with low self inductance. This configuration is generally used to attenuate high frequency signals. The simple design allows high-frequency EMI to discharge to ground via the surrounding electromagnetic field.

L-C or C-L Circuit Filter

Single capacitor combined with an inductive element. It is commonly used in a circuit with a both a low impedance source and a high impedance load or a low impedance load and a high impedance source. The inductive element should face the low impedance.

Pi Circuit Filter

Dual capacitors with a single inductive element positioned between them. The Pi filter provides exceptional high-frequency performance due to its sharper rolloff and is typically used when both source and load impedances are high.

Dimensions in inches (millimeters) and are subject to change without notice.

Introduction to Filter Connectors Multilayer Ceramic Planar Capacitor Arrays

Multilayer Ceramic Planar Capacitor Arrays

Planar, multi-layer ceramic capacitive filters offer reduced size and improved performance compared to discrete discoidal or tubular capacitors. Planar array filter devices have the advantage, especially when compared to capacitive filters integrated at the circuit board level, of being bidirectionally effective at attenuating unwanted noise travelling into and out of equipment enclosures.

As mentioned above, the planar array can be designed with different capacitive values on individual pins, and pin groupings, and can also be selectively equipped with surge protection diodes. The ability to accommodate such Transient VoltageSuppressions (TVS) diodes to protect against voltage spikes from transient sources such as EMP, lightning or Electrostatic Discharge (ESD) is an additional strength of the planar array design. The planar array package can also easily accommodate ferrite elements to add inductance to the filter device. For these reasons and more, the planar array is the most common filter type specified in military aerospace and other high-performance applications.

Multipin planar array filter device, assembled with its ferrite elements and connector contacts, ready for insertion into the connector shell. The flexible design allows for different capacitive values on individual pins as well as the integration of hybrid contacts such as optical termini.

The metal electrodes are plated on alternate ceramic layers with a 'hot' or ground electrode to match the contact pattern of the chosen connector. This results in a discrete capacitance value per hole—ultimately determining the EMI attenuation properties of the assembled filter device. After the layer-cake of dielectric materials and conductive elements is assembled, it is fired at high temperature to create a unified, monolithic structure.

As the figure below illustrates, the planar array is fabricated such that the capacitor positions align exactly to the pin layout positions of the connector. When combined with inductive ferrite elements, TVS diodes or other special circuitry, the final assembly is ready for insertion into the connector shell. The incorporation of filter elements into a standard cylindrical or rectangular connector will necessarily increase the overall length of the package. The extra real estate is usually added to the inside-the-box (non-mating) side of the connector receptacle. Another approach is to attach a connector adapter, or go-between, outfitted with the filter device, to the connector plug. This approach has the advantage of not requiring any dimensional changes in box design or receptacle connector package.

Typically, custom-configured planar arrays, with unique capacitive elements and values, are required to effectively address complex EMI problems such as might be encountered in an avionics bay or in the body of a missile. For this reason, planar array fabrication is accomplished using the most advanced CAD software and CNC machine tools. As critical EMI problems are often discovered late in the development process—perhaps only after equipment has been installed for use—it is critical that turnaround times in design and fabrication of custom designs are kept to a minimum. Glenair is committed to meeting the most aggressive delivery requirements for planar array type filter connectors.

EMI Filter and Transient Voltage Suppression Packaging

The packaging of EMI and TVS elements in standard connectors is an important element in effective EMC design. EMI/EMP connectors typically come in Mil-Spec packaging for easy intermating with Mil-Spec circular, D-sub, Micro-D and other standard formats. Such connectors are broadly identified as ‘low-pass’ filters (i.e., they let low frequency signals pass through and attenuate higher frequencies). The attenuation curve can be shaped using different filter types (different configurations of capacitors and inductors).

While the exterior of these very special connectors look normal enough, inside is another story—a planar array made of multiple layers of ceramic dielectric, separated by sheets of ceramic tape and screen printed with a pattern of metal electrodes to create a capacitor used to suppress or attenuate unwanted noise. Capacitance at each electrode protects against EMI, while carefully placed transient voltage suppression diodes guard against damage from lightning strike and other voltage surges.

Planar, multi-layer ceramic capacitive filters offer reduced size and improved performance compared to discrete discoidal chips or tubular capacitors. Planar array filter devices have the advantage, especially when compared to capacitive filters integrated at the circuit board level, of being bidirectionally effective at attenuating unwanted noise travelling into and out of equipment enclosures.

As critical EMI problems are often discovered late in

the development process—perhaps only after equipment has been installed for use—it is critical that turnaround times in design and fabrication of both standard and non-standard designs are kept to a minimum. Glenair is committed to meeting the most aggressive delivery requirements for planar array type filter connectors.

Glenair's Growing Filter Connector Availability

Applications requiring filtered connectors generally call for specific plating, mounting style, keying, shell size, contact layout, contact gender, termination, and frequency filtration. Typically, the filtered connector is either replacing an existing non-filtered receptacle, or it must mate with an existing cable plug. In some cases the filtering element is built into a connector go-between or saver. Whatever the packaging requirement, Glenair is committed to a “no gaps” product availability model whereby we can quickly build and ship any possible filter connector configuration for industry standard connector families such as MIL-DTL-38999, MIL-DTL-83513 and our own Series 80 “Mighty Mouse.”

Introduction to Filter Connectors EMI Filters and Transient Voltage Suppression Packaging

We currently stock some finished filtered connector parts in our Same Day inventory, and we will continue to add to this stock. More importantly, we have placed into inventory a wide range of the longest lead time component—ceramic planar filter arrays—in the most popular capacitance values. This filter array stocking program enables Glenair to provide the industry's fastest delivery of finished filtered connectors. In addition, we now have the in-house capability to manufacture our own ceramic planar capacitor arrays. This vertical integration will allow us to continue to add to component stock and reduce lead times even further.

Listed below are the current filtered connector families available for the fastest delivery in the industry. For any capacitor array code listed, we can accommodate both C-Section and Pi-Section capacitance values.

Shell Size Layout	Contact Count and Size	Capacitor Array Codes

17	85 #23	A

capacitor codes listed above. These listed filter arrays can make more than 29,000 Mighty Mouse finished parts and more Mighty Mouse filter array layouts are being added to stock every day!

Micro-D Connectors in Solder Cup, Pre-Wired Pigtailed, Vertical Printed Circuit Boards, Right Angle Printed Circuit Boards and In-Line Adapters in any material, plating, or filtration are available in the size and contact counts with the capacitor codes listed below. These listed filter arrays can make almost 35,000 Micro-D finished parts (along with an essentially infinite number of pigtail Micro-D part numbers pre-wired to any length). Again, more Micro-D filter array layouts are being added to stock every day!

In addition to standard catalog products, Glenair filter connector designs may be customized for use in a wide range of application environments including avionic systems, down-hole drilling and logging devices, naval and marine platforms, network-centric ground warfare systems, and missile and satellite/space applications. Please call the factory or visit our website for more information.

Left to right: standard connector, filter connector, TVS connector

Dimensions in inches (millimeters) and are subject to change without notice.

EMP and TVS Defined

Electromagnetic Pulse (EMP) refers to the intense radio frequency pulses produced by nuclear explosions at high altitudes. Other names for this include Nuclear EMP (NEMP) and High-Altitude EMP (HEMP). Similarly, System Generated EMP (SGEMP) refers to electrical noise resultant from large amounts of composite skin used in satellites, aircraft and helicopters that discharge over time. Like other forms of electromagnetic interference, EMP can have a destructive effect on sensitive electronic devices, particularly those used in mission-critical military applications. This occurs if and when the EMP couples to an antenna or an unshielded cable and passes unmolested into an electronic device. EMP hardened equipment is designed to protect vital communications at a time when unhardened devices are likely to fail. Thus it is a standard requirement for many military applications to proactively protect certain devices from EMP via the integration of Transient Voltage Suppression technologies into the connectors that service the device.

Transient Voltage Suppression (TVS) technologies are designed to shunt voltage transients directly to ground before such surges can damage sensitive electronic equipment. Individual TVS diodes as well as diode modules may be incorporated directly into the filter connector package to provide optimal protection for either individual contacts or groups of contacts without significant increases in connector size or weight. Individual circuit protection diodes and diode modules are available for all connector types and are routinely stocked by Glenair to reduce lead-times. RTCA DO-160 and other electrical performance standards now define acceptable benchmarks for withstanding electromagnetic pulse, lightning strike, or other induced voltage surges.

Hermetic Packaging

Hermetic connectors are specified for applications as divergent as submarines and orbiting satellites. They are deployed to resist moisture ingress in underground applications and to withstand pressure differentials in vacuum chambers, laboratory equipment and commercial and military aircraft. Hermetic connectors, such as the MIL-DTL-38999 Series I, II, III and IV supplied by Glenair, are principally designed for use in military aerospace—in fact, the requirement for connector hermeticity was originally driven by military electronic applications. But the products are equally at home in commercial applications such as oil-patch logging equipment or medical devices.

Hermetic connectors are constructed from a core component-set that includes the connector shell, a vitreous glass insert and the selected contacts. Shells may be machined from stainless steel or Kovar[®], an iron-nickel-cobalt alloy with a co-efficient of expansion closely balanced to the glass inserts. Contacts used in hermetic connectors must be fabricated from high-grade iron/nickel materials that can withstand high-heat, and bond effectively to the vitreous glass seal.

As with other connector families, hermetic customers may specify the connector coupling style (threaded, bayonet, etc.), pin or socket gender and layout, contact termination type (solder cup or PCB termination), conductive or non-conductive finish, polarization and so on. Glenair's complete in-house hermetic capability affords us the ability to produce a wide-range of special purpose hermetic connectors designed to meet individual and unique customer specifications—such as EMI/EMP filtering.

Hermetic class EMI/EMP filter connectors are available throughout our complete range of filtered connector products in both Pi and C from 35 pF to 56000 pF. Connector platings and materials are offered in class H2 (stainless steel, electrodeposited nickel).

Dimensions in inches (millimeters) and are subject to change without notice.

Transient Voltage Suppression

Workshop with Serge Gigawatt

Since lightning strikes can be positively or negatively charged, special bi-directional diodes are available. If a system does not already have transient suppression diodes somewhere "in the box," Glenair can include diodes on EMI filtered or non-filtered connectors.

When specifying transient voltage suppression for a given lightning strike waveform (or "shape") and level (or magnitude), diodes must be compatible with EMI filter dielectric withstanding voltage (DWV) rating.

Diode power is rated in watts for a given pulse shape and pulse duration. Typically the reference values are given for a 10/1000 μ s pulse. This means that the diode can absorb the peak power rated for a pulse with 10 μ s rise time and 1000 μ s fall time. If the system is subjected to a different pulse shape or duration the value must be adjusted accordingly. The table on the following page does just that for RTCA DO160 lightning strike.

For high speed applications, diode capacitance and trace inductance are critical. Glenair engineers will recommend a suitable design for each application. This may involve using extremely compact surface mount diodes within the pin field of the connector, as shown below.

Introduction to Filter Connectors Transient Voltage Suppression Diode Selection Guide

Diode Power Selection for Lightning Strike Waveform Threats

DO 160 Waveform	Level	Open Circuit Voltage/Short Circuit Current V/A	Diode Peak Voltage (Vwm)	Diode Clamp Voltage (Vc)	Recommended Diode Power (Watts)

Introduction to Filter Connectors

Transient Voltage Suppression

Diode Selection Guide

Tables for the selection of diodes and recommended DWV for a specified waveform voltage threat.

1. Determine the specification threat waveform and level.
2. Determine the maximum clamping voltage that the system can tolerate (this may be a different value for each pin of the connector).
3. Move down the table to the waveform and Voc/Isc (Open Circuit Voltage/Short Circuit Current) that is covered in the specification.
4. Move across the table left to right and select the recommended diode power level.
5. If the application is a high frequency data line, a low capacitance diode will be needed. There is no difference in the power rating.
6. High speed data lines, Ethernet or USB, cannot tolerate much capacitance at all. These will need a special diode and no filter can be used.
7. If a filter is to be used in the application, consult EMI Filter Rating table (below) to determine the minimum DWV voltage needed to protect the selected filter capacitance.
8. The filter DWV rating applies with or without a diode.

EMI Filter Rating in Dielectric Withstanding Voltage (DWV) For Compatibility with Transient Suppressing Diodes										
DO 160 Waveform	Level	Waveform (Voc)	Recommended Dielectric Withstanding Voltage ▼	Capacitance pF Minimum						
				19000	16000	9000	4000	1650	400	200

Z*	60,000 - 90,000
A	38,000 - 56,000
B	32,000 - 45,000
C	18,000 - 33,000
D	8,000 - 12,000
E	3,300 - 5,000
F	800 - 1,300
G	400 - 600
J	70-120

* Filter Classes X, Y and Z are 250 VDC.
All others are 500 VDC

Notes

Standard voltage rating is 500 VDC DWV.

Insertion loss values quoted are for 50Ω impedance and no load condition.

Classes X, Y and Z are 250 VDC DWV. Consult factory for additional information.

Some shell configurations may require extra length for classes X, Y and Z.

Other configurations available. Consult factory.

Dimensions in inches (millimeters) and are subject to change without notice.

Insertion Loss Evaluation

Insertion loss is an important specification to consider in the selection of filter connectors. Insertion loss is a measure of the degradation experienced by a signal when a device, such as a connector, is inserted into the transmission path.

When a filter element performs its job of stripping signal noise from a transmission line, it may attenuate a portion of the desired signal as well. Measured in decibels (dB), insertion loss should be minimized in sensitive electronic systems which may operate at extremely low current levels. Typically, some amount of insertion loss is considered acceptable to accomplish the necessary signal selectivity, since the signal can always be re-amplified post-filtering. However, in many applications, too large a loss may ultimately result in the unacceptable degradation of system performance.

The evaluation of insertion loss is performed over a specific frequency range—i.e. a spectrum that extends from one limiting frequency to another. The intent being to measure signal degradation for each filter type across the actual operating frequencies of the equipment under consideration. Note that each filter type may yield different (theoretical and actual) insertion loss values depending on the specific capacitance and inductance ratings of the filter elements. Effective EMI/EMP filtering is, therefore, a balance between the purposeful attenuation of signal noise and the unfortunate degradation of signal strength—both conditions directly attributable to the insertion of the filter device into the system. Sensible EMC design should, as a consequence, always incorporate conventional grounding and shielding of interconnect cabling and equipment housings in anticipation of unexpected EMI problems. The tables on the opposite page explain predictable insertion loss [dB] for each filter type (C, L, and Pi), at the available capacitance ratings across a common frequency range [MHz].

Custom Options in Filtered Connectors

Glenair filter connector designs may be optimized for use in a wide range of application environments including avionic systems, down-hole drilling and logging devices, naval and marine platforms, network-centric ground warfare systems, and missile and satellite/space applications. Common electrical customizations include unique capacitance values on individual lines, electrostatic discharge designs, transient voltage suppression diodes, grounded holes and feed-throughs, as well as the incorporation of customer-specified filter architectures including Pi, C, L-C, C-L and T configurations.

Mechanical packaging options in EMI/EMP filter connectors include:

- Hybrid Fiber Optic/Electrical Contacts
- Hermetic Sealing
- Dual-Flange PCB Mount Designs
- Composite Thermoplastic Shell Materials
- Variable Length PCB Tails
- Piggy-Back Crimp Contacts
- EMI Grounding Fingers and Gaskets
- In-Line, Feed-Through, Plug and Other Shell Styles

Custom dual plan Micro-D filter connector with EMI gasket and right angle PCB mounting. Glenair can apply a broad range of custom shell configurations, filter values, TVS technologies—even hybrid fiber optic contacts—into any standard connector package.

Introduction to Filter Connectors Space Grade Applications, Soldering and Lightning Strike

Space Grade Applications

Nonmetallic materials such as rubber, plastic, adhesives and potting compounds can give off gasses when subjected to a vacuum or high heat. For space grade applications, Glenair offers a 24 hour 125° C thermal vacuum outgassing process to ensure our filter connector products do not give off gaseous molecules that might harm sensitive optical or electronic equipment.

The space industry has adopted a standardized test procedure, ASTM E 595, to evaluate outgassing properties of products that contain polymer materials. In the ASTM test, material samples are heated to 125° C at a vacuum of 5×10^{-5} torr for 24 hours. The test sample is then weighed to calculate the Total Mass Loss (TML), which may not exceed 1.00% of the total initial mass. Likewise the quantity of outgassed matter is weighed to determine the Collected Volatile Condensable Material (CVCM), which may not exceed 0.10% of the original specimen mass.

Glenair routinely performs both bakeout and thermal vacuum outgassing procedures on connector products that must conform to NASA screening or other outgassing standards. Our experience has been that the simpler bakeout process is more than adequate to meet the ASTM E 595 benchmark of 1.00% TML and 0.10% CVCM. Glenair is well versed in supplying filter connector products that are optimized for use in space grade applications, and we supply filter connectors compliant to EEE-INST-002, Table 2G, the recognized standard for spacegrade filter connectors.

Soldering

Our filter connector engineers are frequently asked about any special handling procedures that are required when soldering PC Tail and Solder-cup contacts. At issue is the potential to damage filter elements due to the high heat of the soldering process. The short answer is that any trained and qualified operator can complete the operation without any special precautions. While it certainly can't hurt to take some basic precautions such as preheating the connector or utilizing a heat sink on individual

contacts, our tests have revealed that, under normal conditions, the temperature of the ceramic filter array is not radically raised during solder termination of the contacts. Even in tests where we used a solder iron temperature of 350°C and an extremely long 'touch time' of 90 seconds, no adverse effects were observed. In fact, temperature at the ceramic remained well below 100°C at all times.

To prevent detrimental intrusion of cleaning solvents/water into the connector when terminating, the connector must be protected IAW IPC J-STD-001 and/or NASA STD-8739.3. For assistance and/or additional information, please contact the factory.

Composite Connectors and Lightning Strike

Composite thermoplastic materials, such as the 30% glass filled polyetherimide (PEI) used in Glenair's MIL-DTL-38999 Series III Wall Mount Receptacle Connector (240-011) have been tested for mechanical and electrical survivability to direct and indirect lightning strike. At issue is the ability of the composite connector shell to maintain its electrical continuity in the event of an intense voltage surge resulting from lightning strike.

In testing in accordance with MIL-STD-1344, items are subjected to waveform 1 and 5B using a high current generator. Items must remain functional without degradation of the unit's electrical performance, including filtering elements and TVS diodes and modules. Waveform 1 and 5B are applied starting at 3kA increasing to 20kA checking continuity measurements at set intervals. Waveform 1 is additionally subjected to an oscillatory wave starting at 30kA and increasing in 10kA steps until failure in continuity is measured.

While larger composite connector shell sizes (12 to 24) conform to MIL-STD-1344, smaller sizes (8 and 10) fail the test. Customers should select alternative materials, aluminum or stainless steel, when specifying small connector shell sizes in applications subject to lightning strike.

Rev. 12.07.20

Introduction to Filter Connectors EMI/EMP Glossary

Absorption Loss: That part of shielding effectiveness dealing with energy absorption through a metal barrier.

Attenuation: Reduction in the quality or magnitude of an electrical signal. Suppression of EMI noise in the interconnect transmission path.

Aperture Leakage: Compromise in shielding effectiveness from holes, slits, and slots from braid, windows, cooling openings, and joints of metal boxes where EMI can get in or out.

Bandwidth: The frequency interval between the upper and lower 3 dB down response of a receiver.

Broadband EMI: Electrical disturbances whose frequency spectrum cover several octaves or decades in the frequency spectrum or exceed the receiver bandwidth.

Capacitance: The measure or ability of a multilayer ceramic planar array to capture and store electrical energy.

Common Mode (CM): As applied to two or more wires, all currents flowing therein with the same polarity.

Conducted Interference: EMI transmitted along an unshielded conductor or cable.

Coupling Path: The conducted or radiated path by which interfering energy gets from a source to a victim.

Cross Modulation: Energy from one transmitter that causes the modulation to change on a received signal from another transmitter.

Crosstalk: Electromagnetic energy bleed across dielectric materials, for example, in twisted pair cable sets or across adjacent connector contacts, disrupting the electrical signals in each respective circuit.

Differential Mode (DM): Voltages or currents on a wire pair that are of opposite polarity.

Dielectric Withstanding Voltage (DWV): Rating, expressed in volts at a given frequency at ambient temperature defining the maximum voltage a dielectric material can withstand before failing.

Drain: path by which charges absorbed by a conductor move to ground in a properly grounded system.

Electric Field: A radiated wave's potential gradient in volts per meter (V/m).

Electrical Gasket: A compressible bond used between two mating metal members to secure a low-impedance path between them.

EMC: Electromagnetic compatibility, the conditions under which all components of a system do not interfere with each other or with their environment.

EMI: Electromagnetic interference (opposite of EMC). Electromagnetic disturbance that degrades performance of electronic equipment.

EMP: Electromagnetic pulse. A broadband, high-intensity, short-duration burst of electromagnetic energy such as might occur as a result of a nuclear explosion.

ESD: Electrostatic discharge. A momentary (and unwanted) discharge of built-up electrical energy, usually from an electrically insulated object to an object with a different electrical potential.

Emission: Unwanted electromagnetic signal emanating from a piece of equipment.

Ferrite: Powdered magnetic material in form of beads, rods, and rings used to absorb EMI on wires and cables.

Field Strength: Radiated voltage or current per meter corresponding to electric or magnetic fields.

Filter: A device to block the flow of EMI while passing the desired signal frequencies.

Grounding: A conductive path to earth designed to eliminate electrical shock by shunting away dangerous currents.

Impulse Noise: A transient electrical disturbance, usually repetitive.

Inductors: Used with capacitors to form tuned circuits to filter out specific signal frequencies.

Magnetic Field: A radiated wave's current gradient, expressed in amperes per meter (A/m).

Multilayer Planar Array: Multi-layer ceramic EMI filter device housed in a connector. The most widely applied type of EMI filter.

Narrowband: EMI Interference whose emission bandwidth is less than the bandwidth of the EMI measuring receiver or spectrum analyzer.

Power Conditioning: Reduction of EMI pollution on power mains by inserting filters, isolators, regulators, or an uninterruptible power supply (UPS).

Radiated Interference: EMI or noise transmitted from any electrical system, from power-lines to mobile telephones.

Radio Frequency Interference (RFI): A special class of electromagnetic interference in which radio frequency transmissions cause unintentional problems in equipment operation.

Reflection Loss: Shielding effectiveness due to energy reflection from impedance mismatch between incident field and metal barrier.

Roll-Off: The frequency in an attenuation curve at which a filter begins to reduce the quality or magnitude of an electrical signal.

Shielding Effectiveness (SE): The ratio of field strengths (absorption and reflection losses) before and after installing a shield.

Dimensions in inches (millimeters) and are subject to change without notice.

Introduction to Filter Connectors EMI/EMP Glossary • RoHS Compliance Preference for Domestic Specialty Metals Statement

Shot Noise: The noise caused by random fluctuations in the motion of charge carriers such as electrons in a conductor.

Skin Depth: The calculated metal layer thickness through which some 63 percent of the surface current flows.

Surge: A sudden voltage increase on the power mains.

TEMPEST: Transient Electromagnetic Pulse Surveillance Technology.

Transfer Impedance (Z_t): The quality of cable shield performance calculated by the ratio of the coupled voltage to the surface current, in ohms per meter (Ω/m).

Transient: A short-duration voltage surge due to a lightning strike or other dynamic event.

UPS: Uninterruptible power supply.

Waveform: For lightning events, measure of electrical transient exposure level and surge severity.

Glenair Statement on RoHS Compliance

European Union Directive 2002/95/EC on Restriction of the use of certain Hazardous Substances ("RoHS") states that certain types of OEM equipment (primarily consumer electronic products such as personal computers) shall not contain lead, mercury, cadmium, hexavalent chromium, PBB's or PBDE's. For the record, Glenair does not produce any OEM products of this type. Furthermore, our interconnect components are either free of the substances RoHS controls, or specifically intended for use in military-aerospace applications that are exempt. Accordingly, Glenair will continue to offer cadmium and chromate finishes in accordance with DoD and aerospace specifications and as required by these customers. Makers of consumer products should refer to RoHS guidelines to ensure interconnect components are correctly specified when used in in RoHS regulated electronic equipment. Consumer product manufacturers may also refer to the following table to ensure any products they may specify from this catalog are equipped with RoHS compliant materials and finishes. Going forward, Glenair will gladly employ substitutes to current military-aerospace materials and finishes as they are proven reliable and as military standards permit.

Connector and Backshell Plating: RoHS Compliance		
Plating Type	RoHS Compliance	Notes
Cadmium with yellow or olive drab chromate conversion coating over electroless nickel	No	Electroless nickel is the preferred alternate.
Electroless nickel		First choice for RoHS compliance. Good corrosion resistance, excellent conductivity, M83513 approved, always in stock.
Stainless steel shell, passivated		Higher cost but unsurpassed corrosion resistance, not conductive enough for typical EMI needs. Build-to-order.
Gold over aluminum		Low volume, higher cost, excellent conductivity. Build-to-order.
Ni-PTFE 1000 Hour Grey™ Nickel Fluorocarbon Polymer		Conductive, CAD-Free, 1000 hr. salt spray plating offers outstanding corrosion protection. MIL-DTL-38999 Rev. L
Chem film	No	Electroless nickel is the preferred alternate.

Preference for Domestic Specialty Metals Statement

For parts we make and sell, we comply with the Preference for Domestic Specialty Metals requirements (as modified by Alternate 1, Deviation 20008-00002) that, additionally, are required to meet US Military Specifications, Federal Specifications, or ASTM (or other industry) Specifications. Vendors certify (and are audited) to adherence with these requirements with each purchase order fulfilled. Glenair parts are in compliance with DFARS 252.225-7014, Alternate 1, Deviation 20008-00002, "Preference for Domestic Specialty Metals."

Glenair Diode Burn-In Services: Fast, Reliable and Comprehensive

In addition to complete system design for EMI/RFI filtering applications and transient over-voltage suppression, Glenair offers in-house high temperature reverse bias (HTRB) diode burn-in services—a screening process designed to ensure Transient Voltage Suppression diode reliability. The reliability of TVS devices is of extreme importance due to the mission-critical role TVS protected electronic equipment plays in aerospace, communications, command and control systems. Failure of a diode is generally attributed to a physical defect in the part. Diode failure modes can include thermal fatigue, contact migration and other factors which can contribute to a short-circuit mode. Industry-standard qualification tests have been developed with stress levels matched to application requirements. The HTRB

test is used to monitor off-state leakage currents to reveal any failure modes prior to final assembly. In general, semiconductor manufacturers can take weeks to deliver tested diodes, whereas Glenair currently takes only days. Our test lab has the capabilities to test surface mount or leaded diodes. Leakage current is monitored throughout the burn-in process. Other labs may just take readings only before and after cycling, potentially missing weak diodes that could fail in the field. Glenair takes and records multiple reading throughout the burn-in process to ensure highest reliability of HTRB services. For this reason, you can count on Glenair for unparalleled diode reliability testing.

Glenair's state-of-the-art diode burn in process tests leaded and surface mount diodes with leakage current monitored throughout the entire test procedure, ensuring field reliability.

				OC21365-0915313 Random Vibration at Temp (247-245)
Shock	3.28	4.5.24.1	YES	OC21362-0915310 Shock (247-245)
Functional Test - Ground contact resistance to connector shell	N/A	N/A	NO	NOT REQUIRED. UUT DOES NOT HAVE GROUND CONTACTS.
Functional Test - Contact capacitance to ground	N/A	N/A	YES	OC21362-0915310 Shock (247-245)
Functional Test - Dielectric withstanding voltage at sea level	N/A	N/A	YES	OC21362-0915310 Shock (247-245)
Functional Test - Insulation resistance	N/A	N/A	YES	OC21362-0915310 Shock (247-245)
Shell-to-shell conductivity	3.29	4.5.25	YES	OC22635-0316173 Shell-to-Shell Conductivity (247-245)
High temperature exposure	3.38.2	4.5.34.2	YES	High Temperature Exposure (247-245)

Dimensions in inches (millimeters) and are subject to change without notice.

Compliance Matrix for D38999 Series III Type Filter Connectors

Humidity	3.30	4.5.26	YES	OC21366-0915314 Humidity (247-245)
Insulation resistance at ambient temperature	N/A	N/A	YES	OC21366-0915314 Humidity (247-245)
Dielectric withstanding voltage at sea level	N/A	N/A	YES	OC21366-0915314 Humidity (247-245)
Functional Test - Ground contact resistance to connector shell	N/A	N/A	NO	NOT REQUIRED. UUT DOES NOT HAVE GROUND CONTACTS.
Functional Test - Contact capacitance to ground	N/A	N/A	YES	OC21366-0915314 Humidity (247-245)
Functional Test - Dielectric withstanding voltage at sea level	N/A	N/A	YES	OC21366-0915314 Humidity (247-245)
Functional Test - Insulation resistance	N/A	N/A	YES	OC21366-0915314 Humidity (247-245)
Contact retention	3.24	4.5.20.1	NO	NOT REQUIRED. UUT HAS NON-REMOVABLE CONTACTS
Post test examination	3.52 and 3.53	4.5.49	YES	STANDARD TEST

MIL-DTL-38999, Table Xii, Group 5	Paragraph MIL-DTL-38999		3 Samples	
TEST OR INSPECTION	REQUIREMENT	TEST METHOD	TEST REQUIRED?	TEST REPORT
Visual and Mechanical Inspection	3.1, 3.3, 3.4, 3.5, 3.52 and 3.53	4.5.1	YES	OC22772-0616281A Fluid Immersion (247-245)
Ozone exposure	3.33	4.5.29	NO	NOT REQUIRED. UUT WILL NOT BE EXPOSED TO OZONE.
Insulation resistance at ambient temperature	N/A	N/A	YES	OC22772-0616281A Fluid Immersion (247-245)
Dielectric withstanding voltage at sea level	N/A	N/A	YES	OC22772-0616281A Fluid Immersion (247-245)
Fluid immersion	3.34	4.5.30	YES	OC22772-0616281A Fluid Immersion (247-245)
Dielectric withstanding voltage at sea level	N/A	N/A	YES	OC22772-0616281A Fluid Immersion (247-245)
Coupling torque	3.11	4.5.7	YES	OC22772-0616281A Fluid Immersion (247-245)
Functional Test - Ground contact resistance to connector shell	N/A	N/A	NO	NOT REQUIRED. UUT DOES NOT HAVE GROUND CONTACTS.
Functional Test - Contact capacitance to ground	N/A	N/A	YES	OC22772-0616281A Fluid Immersion (247-245)
Functional Test - Dielectric withstanding voltage at sea level	N/A	N/A	YES	OC22772-0616281A Fluid Immersion (247-245)
Functional Test - Insulation resistance	N/A	N/A	YES	OC22772-0616281A Fluid Immersion (247-245)
Post test examination	3.52 and 3.53	4.5.49	YES	OC22772-0616281A Fluid Immersion (247-245)

MIL-DTL-38999, Table Xii, Group 9	Paragraph MIL-DTL-38999		3 Samples	
TEST OR INSPECTION	REQUIREMENT	TEST METHOD	TEST REQUIRED?	TEST REPORT
Visual and Mechanical Inspection	3.1, 3.3, 3.4, 3.5, 3.52 and 3.53	4.5.1	YES	OC22865-0716347A Salt Spray (247-245)
Shock (high impact)	3.28	4.5.24.2	NO	OC21209-0915355 Hi-Impact Shock (247-463)
Dielectric withstanding voltage at sea level	N/A	N/A	YES	OC22865-0716347A Salt Spray (247-245)
Electrolytic erosion	3.39	4.5.35	YES	OC22865-0716347A Salt Spray (247-245)
Shell-to-shell conductivity	3.29	4.5.25	YES	OC22865-0716347A Salt Spray (247-245)
Temperature cycling	N/A	N/A	NO	NOT REQUIRED.
Salt spray (corrosion)	3.17	4.5.13.2	YES	OC22865-0716347A Salt Spray (247-245)
Functional Test - Ground contact resistance to connector shell	N/A	N/A	NO	NOT REQUIRED. UUT DOES NOT HAVE GROUND CONTACTS.
Functional Test - Contact capacitance to ground	N/A	N/A	YES	OC22865-0716347A Salt Spray (247-245)
Functional Test - Dielectric withstanding voltage at sea level	N/A	N/A	YES	OC22865-0716347A Salt Spray (247-245)

Dimensions in inches (millimeters) and are subject to change without notice.

Compliance Matrix for D38999 Series III Type Filter Connectors

Functional Test - Insulation resistance	N/A	N/A	YES	OC22865-0716347A Salt Spray (247-245)
Coupling torque	3.11	4.5.7	YES	OC22865-0716347A Salt Spray (247-245)
Shell-to-shell conductivity	3.29	4.5.25	YES	OC22865-0716347A Salt Spray (247-245)
Coupling pin strength	3.21	4.5.17	NO	NOT REQUIRED. UUT IS A SERIES III TYPE CONNECTOR.
Post test examination	3.52 and 3.53	4.5.49	YES	OC22865-0716347A Salt Spray (247-245)

MIL-DTL-38999, Table Xii, Group 10	Paragraph MIL-DTL-38999		2 Samples	
TEST OR INSPECTION	REQUIREMENT	TEST METHOD	TEST REQUIRED?	TEST REPORT
Visual and Mechanical Inspection	3.1, 3.3, 3.4, 3.5, 3.52 and 3.53	4.5.1	NO	NOT REQUIRED. UUT IS NOT A FIREWALL CLASS CONNECTOR.
Firewall	3.40	4.5.36	NO	NOT REQUIRED. UUT IS NOT A FIREWALL CLASS CONNECTOR.
Post test examination	3.52 and 3.53	4.5.49	NO	NOT REQUIRED. UUT IS NOT A FIREWALL CLASS CONNECTOR.

MIL-DTL-38999, Table Xii, Group 11	Paragraph MIL-DTL-38999		3 Samples	
TEST OR INSPECTION	REQUIREMENT	TEST METHOD	TEST REQUIRED?	TEST REPORT
Visual and Mechanical Inspection	3.1, 3.3, 3.4, 3.5, 3.52 and 3.53	4.5.1	YES	OC22641-0516246 Ice & Dust (247-245)
Ice resistance	3.44	4.5.40	YES	OC22641-0516246 Ice & Dust (247-245)
Dust (fine sand)	3.45	4.5.41	YES	OC22641-0516246 Ice & Dust (247-245)
Impact (classes J and M)	3.49	4.5.45	NO	NOT REQUIRED. UUT IS NOT A CLASS J OR M CONNECTOR.
Functional Test - Ground contact resistance to connector shell	N/A	N/A	NO	NOT REQUIRED. UUT DOES NOT HAVE GROUND CONTACTS.
Functional Test - Contact capacitance to ground	N/A	N/A	YES	OC22641-0516246 Ice & Dust (247-245)
Functional Test - Dielectric withstanding voltage at sea level	N/A	N/A	YES	OC22641-0516246 Ice & Dust (247-245)
Functional Test - Insulation resistance	N/A	N/A	YES	OC22641-0516246 Ice & Dust (247-245)
Post test examination	3.52 and 3.53	4.5.49	YES	OC22641-0516246 Ice & Dust (247-245)

MIL-DTL-38999, Table Xii, Group 13	Paragraph MIL-DTL-38999		2 Samples	
TEST OR INSPECTION	REQUIREMENT	TEST METHOD	TEST REQUIRED?	TEST REPORT
Visual and Mechanical Inspection	3.1, 3.3, 3.4, 3.5, 3.52 and 3.53	4.5.1	NO	NOT REQUIRED. UUT IS NOT A CLASS J OR M CONNECTOR.
Hydrolytic stability (classes J and M)	3.47	4.5.43	NO	NOT REQUIRED. UUT IS NOT A CLASS J OR M CONNECTOR.
Post test examination	3.52 and 3.53	4.5.49	NO	NOT REQUIRED. UUT IS NOT A CLASS J OR M CONNECTOR.

MIL-DTL-38999, Table Xii, Group 14	Paragraph MIL-DTL-38999		2 Samples	
TEST OR INSPECTION	REQUIREMENT	TEST METHOD	TEST REQUIRED?	TEST REPORT
Visual and Mechanical Inspection	3.1, 3.3, 3.4, 3.5, 3.52 and 3.53	4.5.1	NO	NOT REQUIRED. UUT DOES NOT HAVE ACCESSORY THREADS.
Coupling torque	3.11	4.5.7	NO	NOT REQUIRED. UUT DOES NOT HAVE ACCESSORY THREADS.
Backshell shield braid-to-shell conductivity	3.29.1	4.5.25.1	NO	NOT REQUIRED. UUT DOES NOT HAVE ACCESSORY THREADS.

Dimensions in inches (millimeters) and are subject to change without notice.

Compliance Matrix for D38999 Series III Type Filter Connectors

Resistance to indirect lightning strike	3.51	4.5.47	NO	NOT REQUIRED. UUT DOES NOT HAVE ACCESSORY THREADS.
Backshell shield braid-to-shell conductivity	3.29.1	4.5.25.1	NO	NOT REQUIRED. UUT DOES NOT HAVE ACCESSORY THREADS.
Coupling torque	3.11	4.5.7	NO	NOT REQUIRED. UUT DOES NOT HAVE ACCESSORY THREADS.
Insulation resistance at ambient temperature	N/A	N/A	NO	NOT REQUIRED. UUT DOES NOT HAVE ACCESSORY THREADS.
Dielectric withstanding voltage at sea level	N/A	N/A	NO	NOT REQUIRED. UUT DOES NOT HAVE ACCESSORY THREADS.
Post test examination	3.52 and 3.53	4.5.49	NO	NOT REQUIRED. UUT DOES NOT HAVE ACCESSORY THREADS.

Lightning Transient Test Group	Paragraph MIL-DTL-38999		2 Samples	
TEST OR INSPECTION	REQUIREMENT	TEST METHOD	TEST REQUIRED?	TEST REPORT
Lightning transient test	N/A	N/A	YES	TR056503 Lightning (247-245)
Functional Test - Ground contact resistance to connector shell	N/A	N/A	NO	NOT REQUIRED. UUT DOES NOT HAVE GROUND CONTACTS.
Functional Test - Contact capacitance to ground	N/A	N/A	YES	TR056503 Lightning (247-245)
Functional Test - Dielectric withstanding voltage at sea level	N/A	N/A	YES	TR056503 Lightning (247-245)
Functional Test - Insulation resistance	N/A	N/A	YES	TR056503 Lightning (247-245)

Rapid Decompression And Explosion Proofness Test Group	Paragraph MIL-DTL-38999		2 Samples	
TEST OR INSPECTION	REQUIREMENT	TEST METHOD	TEST REQUIRED?	TEST REPORT
Rapid decompression	N/A	N/A	YES	OC22757-0616266 Rapid Decompression (247-245)
Explosion Proofness	N/A	N/A	NO	NOT REQUIRED. UUT DOES NOT HAVE ACTIVE COMPONENTS.
Functional Test - Ground contact resistance to connector shell	N/A	N/A	NO	NOT REQUIRED. UUT DOES NOT HAVE GROUND CONTACTS.
Functional Test - Contact capacitance to ground	N/A	N/A	YES	OC22757-0616266 Rapid Decompression (247-245)
Functional Test - Dielectric withstanding voltage at sea level	N/A	N/A	YES	OC22757-0616266 Rapid Decompression (247-245)
Functional Test - Insulation resistance	N/A	N/A	YES	OC22757-0616266 Rapid Decompression (247-245)

Filter Life Test Group	Paragraph MIL-DTL-38999		2 Samples	
TEST OR INSPECTION	REQUIREMENT	TEST METHOD	TEST REQUIRED?	TEST REPORT
Filter life	N/A	N/A	YES	1000 Hour Life Test (247-075)
Functional Test - Ground contact resistance to connector shell	N/A	N/A	NO	NOT REQUIRED. UUT DOES NOT HAVE GROUND CONTACTS.
Functional Test - Contact capacitance to ground	N/A	N/A	YES	1000 Hour Life Test (247-075)
Functional Test - Dielectric withstanding voltage at sea level	N/A	N/A	YES	1000 Hour Life Test (247-075)
Functional Test - Insulation resistance	N/A	N/A	YES	1000 Hour Life Test (247-075)

WHY
CHOOSE

Glenair?

Plenty of Raw Materials!

Outstanding
Customer Service!

Abundant Machining Capacity!

In-House Assembly!

Huge "Same-Day" Inventory!

Glenair®

Glenair, Inc.
1211 Air Way
Glendale, CA
