

**SERIES 79**

# MICRO-CRIMP

INSERT ARRANGEMENTS • SPECIFICATIONS • MOD CODES

**M**icro-D connectors are a popular choice for space flight. Their small size and reduced weight, combined with excellent shock and vibration performance, has led to their widespread use on space vehicles. The Micro-Crimp connector brings the benefits of a crimp, rear-release contact system to the Glenair Micro-D family. Connectors can be terminated onto complicated, multi-branch wiring harnesses without splicing or soldering. Specifying a Series 79 Micro-Crimp connector for space flight may include NASA screening and outgassing processing (managed with simple mod codes) or material and plating selections such as the gold-plated micro-crimp connector shown above. See page C-9 for the complete range of material and plating options.
