

PRODUCT FEATURES

- Conduit Fittings for Every Interconnect Application Requirement—Connector Fittings, Transition Fittings, Bulkhead Fittings and Splice Kits
- User-Installable—Accommodates Last-Minute Engineering Changes
- Perfect for Prototypes and Other Limited Quantity Applications
- Wide Selection of Angular Configurations
- Available in Standard Aluminum or Optional Brass, Stainless Steel or Low-Carbon Steel
- Quick Assembly Permits a Variety of Individually Specified Configurations

An Unlimited Range of Conduit Termination Fittings—From Circular and Rectangular Connector Fittings to Transitions, Bulkhead Feed-Through Adapters and More

User-installable fittings provide complete convenience in assembly, maintenance and repair

Interconnect wiring systems must terminate to a wide selection of connectors and feed-through devices. The termination of EMI and environmental conduit systems to connector adapters and other fittings must be accomplished so as to eliminate entry points for electromagnetic interference and environmental damage. Conduit fittings must also accommodate the wide variety of braided shielding and jacketing which enclose the bulk conduit. Finally, fittings must be manufactured so as to facilitate efficient installation and repair by a broad range of customers. Glenair supplies the widest selection of fittings in the interconnect industry. Our Series 75 Metal-Core Conduit Fittings are precision machined to exacting specifications, and are in wide use in many industries.

Glenair offers hundreds of fitting design options not presented in this catalog. Consult the factory for other specific end fittings or adapters you may require.
