

# METAL AND COMPOSITE Shrink Boot Adapters

Choose from the industry's largest offering of metal or composite shrink boot adapters. Light-weight and simple to install adapters accommodate shrink boots and work with shielded and unshielded cables. Shrink boots provide simple and cost effective environmental protection from dust and debris. As heat is applied to the boot it will begin to return to its original size and the lipped edge of the boot will lock around a recessed groove at the rear of the adapter. Adhesives create a water tight seal around the adapter and cable while the boot also provides mechanical strain relief. Cable braid termination platforms support band termination as-well-as lamp-base threads, magna-forming or Tinel® locking systems for EMI/RFI protection. All adapters work with lipped-type shrink boots.

Additional information can be found in the Glenair Circular Connector Adapters and Accessories catalog. Comprehensive information on composite adapters can be found in our Composite Thermoplastic Connectors and Accessories catalog. For additional details on mil-spec versions, refer to Mil-Spec Adapters and Connector Accessories catalog.

- Metal and Composite
- Rotatable Self Locking and Direct Coupling Styles
- Standard and Low Profile Designs
- Straight, 45° and 90° configurations
