

Section J Well-Master™ High Temperature Micro-D

Micro-D
Well-Master™ 260

Product Selection Guide

Well-Master^{260°}®

GHTM Well-Master™ High Temperature Micro-D Oil, gas and geothermal wells can expose electronic equipment to temperatures in excess of 200°, exceeding the recommended operating temperature of standard Micro-D Connectors. For these demanding environments Glenair has developed the Well-Master™ to provide continuous operation in temperatures of 260° or more. With key features such as rugged Passivated Stainless steel shells and hardware, high temperature liquid crystal polymer (LCP) insulators allow these connectors to survive the most demanding high-temperature environments.
