Removal Tool
For Fiber Optic Termini

Removal Tool for Fiber Optic Termini

The fiber optic terminus removal tool is designed for use with size 16 front release/rear entry termini. Sliding the tool into the face of the insulator and depressing the plunger—after first removing the alignment sleeve from socket termini—enables users to quickly and easily remove the fiber terminus from the rear of the insert. Compatible with Glenair front release fiber optic termini.

Part Number	Compatible Termini
